A description of these regulatory accounts

Thanet OFTO Limited ("the Company" and "the licensee"), is a holder of an Offshore Electricity Transmission Licence ("the licence") granted under the Electricity Act 1989. The licence was awarded to the Company on 17 December 2014 by The Gas and Electricity Markets Authority ("the Authority"). Under standard condition E2 of this licence, we are required to prepare and publish annual regulatory accounts setting out the financial position and performance of the regulatory business covered by the licence.

Scope of the regulatory accounts

These regulatory accounts are prepared in respect of the licensee's regulatory transmission business. The Company only has one activity - that being the operation of its regulated transmission business; consequently, the regulatory financial statements contained herein reflect the same scope as that reported in the Company's statutory accounts for the year ended 31 March 2018 as prepared in accordance with section 396 of the Companies Act 2006.

Content of the regulatory accounts

In accordance with the licence these regulatory accounts comprise:

- an Operating and Financial Review commencing on page 3;
- a Directors' Report commencing on page 21;
- a Corporate governance statement commencing on page 23;
- a Statement of Directors' responsibilities for preparing regulatory accounts on page 26;
- the Independent auditor's report on the regulatory accounts commencing on page 27;
- regulatory financial statements commencing on page 29;
- a statement showing transactions between the Company and its ultimate controller and other related disclosures. The information required by this statement is shown in note 15 to the regulatory financial statements "related party transactions" on page 48.

Relationship of regulatory accounting statements with statutory accounts

The financial information contained in these regulatory accounting statements does not constitute statutory accounts within the meaning of section 396 of the Companies Act 2006. Statutory accounts for the Company for the year ended 31 March 2018, to which the financial information relates, will be delivered to the registrar of Companies.

The auditor has made a report under Section 495 of the Companies Act 2006 on those statutory accounts which was unqualified and did not contain a statement under Section 498(2) or (3) of the Act. The auditor's opinion on the Company's statutory accounts is addressed to, and for the benefit of, the members of the Company and not for any other person or purpose. The auditor has clarified, in giving their opinion on those statutory accounts, that it has been prepared for and only for the Company's members as a body in accordance with Chapter 3 of Part 16 of the Companies Act 2006 and for no other purpose. In giving their opinion, they do not accept or assume responsibility for any other purposes or to any other person to whom their audit report on the statutory accounts is shown or into whose hands it may come save where expressly agreed by their prior consent in writing.

The statutory accounts of the Company can be obtained from the website of the Company at www.thanetofto.co.uk.

تات.
This report was approved by the board on July 2018 and signed by its order.

Introduction

This Operating and financial review explains the operations of Thanet OFTO Limited and the main trends and factors underlying the development and performance of the Company during the period ended 31 March 2018, as well as those matters which are likely to affect its future development and performance.

The ultimate parent Company of the Company is Thanet OFTO Holdco Limited, a Company registered in England and Wales, United Kingdom.

The Company's principal activity is to provide an electricity transmission service to National Grid Electricity Transmission plc ("NGET") - the electricity transmission system operator for Great Britain. The Company owns and operates a transmission system that electrically connects an offshore wind farm generator to the onshore transmission system operated by NGET.

Background

The Office of Gas and Electricity Markets ("the authority"), in partnership with the Department for Business, Energy & Industrial Strategy ("BEIS") (previously Department of Energy and Climate Change ("DECC")), has developed a regulatory regime for electricity transmission networks connecting offshore wind farms to the onshore electricity system. A key feature of this regime is that the transmission assets required by offshore generators should be owned and operated by offshore transmission owners ("OFTOs"). OFTOs are subject to the conditions of a transmission licence.

The Company holds the Licence, awarded by the Authority on 17 December 2014. The asset was purchased by the use of secured loans and subordinated debt. This Licence, amongst other matters, permits and requires the Company to maintain and operate the Thanet offshore electricity transmission assets with a revenue entitlement period of 20 periods from the date funds were drawn on 17 December 2014. The Company's offshore electricity transmission system exports the output of the Thanet wind farm owned by Thanet Offshore Winds Limited (TOWL) to NGET's onshore electricity transmission system.

The Electricity and Gas (Internal Markets) Regulations 2011 require all transmission system operators such as the Company to be certified as complying with the unbundling requirements of European Parliament Directive concerning common rules for the internal market in electricity ("the third package"). On 17 December 2014, the Company was issued a certificate pursuant to section 10D of the Electricity Act 1989 by the Authority confirming its compliance with the third package requirements. The Company has ongoing obligations and is required to make certain ongoing declarations to the Authority to ensure compliance with the terms of the certificate which it has met through to the date of this report.

The Company's offshore electricity transmission system

The Company transmits the electrical power of the Thanet wind farm from the offshore connection point of the Company's electrical assets to the onshore connection point of the Company's assets with the electricity transmission system of NGET. The roles and responsibilities of parties at electrical connection points are dealt with through Interface Agreements and industry codes.

The Thanet offshore wind farm comprises 100 turbines, with a combined capacity of around 300 megawatts ("MW"), and is located approximately seven nautical miles from North Foreland Point on the Kent coast. The power that is generated by the wind farm is transported to shore by the Company and connects into the NGET system at Richborough, Kent.

The construction of the Thanet transmission assets was completed in April 2010 and the assets were energised in June 2010. The Thanet transmission assets are all within UK territorial waters. Ramsgate is the nearest port. The transmission assets connect to the distribution system at the Richborough 132kV substation near Sandwich. The onshore distribution licensee is UK Power Networks. The transmission assets for the Thanet wind farm were constructed by Thanet Offshore Wind Ltd ("TOWL"), a wholly owned Company of Vattenfall AB ("Vattenfall").

The Company's long term business objectives

The Company is a special purpose vehicle formed to hold the Licence. Its non-financial objectives are, therefore, consistent with the objectives of the Licence. The Company will achieve these objectives by ensuring its compliance with the Licence; industry codes and legislation and by operating and maintaining its transmission system in accordance with good industry practice.

The Company's financial objective is to provide financial returns to shareholders consistent with, or in excess of, the business plan that supported its tender offer for the Thanet offshore transmission system. The Company will seek to achive this objective by:

- meeting its revenue targets by operating the transmission system at availability levels equal to, or higher than, the Licence target;
- adopting and maintaining a financing structure that is, as a minimum, as efficient as that contemplated by the business plan; and
- · controlling costs and seeking efficiency improvements.

The Company's operating model

The Company's operating model is to outsource all operational and maintenance ("O&M") activities including asset management capability. O&M activities are outsourced to Balfour Beatty Utility Solutions Limited. Balfour Beatty Investments Limited ("BBI") provides certain financial and management services to the Company through a Professional Services Agreement ("PSA"). As part of its general asset management responsibilities BBI fulfils the role of an 'informed buyer' to ensure that the outsourced O&M services are of the required quality to ensure that the Company meets its Licence obligations and complies with good industry practice. The Company has mitigated the performance risk of its outsourced service providers through the O&M and PSA contract.

With effect from 17 December 2014 the costs incurred by BBI have been recharged to the Company in accordance with the PSA.

The Company's approach to managing the business

The Company's general approach to the management and operation of its business is based on ensuring that the right balance is achieved between cost, quality, performance, innovation and financial returns so as to optimise the cost of its services to the end consumer. In doing so the Company:

- · has a relentless focus on transmission system availability;
- recognises that the inherently hazardous nature of the Company's assets and operations requires a strong focus on Health, Safety and the Environment ("HS&E");
- has the right people working safely to standards using the right processes, technology and systems;
- has implemented a risk management approach that ensures that risks are assessed, managed and reported appropriately; and
- has adopted a governance framework that facilitates compliance with law, regulations and licence conditions.

Principal regulatory, industry contracts and industry code matters

The Company enjoys benefits and is subject to a number of regulatory and contractual obligations arising from and including: the Licence; the Transmission Owner Construction Agreement ("TOCA") with NGET and the System Operator – Transmission Owner Code ("STC"). The Company's operations are also subject to a range of industry specific legal requirements.

A summary of some of the major features of the Licence, industry contracts and electricity code matters is described below.

Licence obligations

Under the terms of the Licence the Company is required to carry out its licenced activities and have in place governance arrangements that ensure (amongst other obligations) that the Company does not provide cross-subsidies to, or receive cross-subsidies from any other business of the Licensee or of any affiliate. In addition, the Licence places restrictions on the Company's activities and how it conducts its transmission activities. In carrying out its transmission activities it must do so in a manner that does not confer upon it an unfair commercial advantage, in particular, in relation to any activity that does not relate to the operation of the offshore transmission business.

A failure by the Company to materially comply with the terms of the Licence could ultimately lead to the revocation of the Licence. The Board of Directors take very seriously its obligations to comply with the terms of the licence and has processes, procedures and controls in place to ensure compliance.

Regulated revenue and incentives

The Licence awarded by the Authority to the Company determines how much the Company may charge for the OFTO services that it provides to NGET in any relevant charging period in accordance with a regulatory formula. Each charging period is from 1 April to 31 March. The Licence also provides the Company with an incentive to ensure that the offshore transmission assets are available to transmit electricity by reference to the actual availability of the Company's transmission system in any given calendar period versus the regulatory target. The regulatory target availability is 98.31% of the total megawatt hour capacity of the Company's electricity transmission system (as determined by the Company's System Capability Statement) in any given charging period, or part thereof.

Transmission charges are based on the actual transmission system availability of 100%, and increase on 1 April following any given period by reference to the average rate of increase in the UK retail price index ("RPI") in the period to the previous December. The revenue derived from charges based on this target availability represents the Company's "base revenue". For the avoidance of doubt, the Company's transmission charges are not exposed to commodity risk and are not exposed to any generation risk.

As previously noted, the Licence contains mechanisms to incentivise the Company to provide the maximum possible electricity transmission system availability, having regard to the safe running of the system. The Company is incentivised on a monthly basis with higher targets, and higher potential penalties or credits, in the winter months, and lower targets, and lower potential penalties or credits, in the summer months. These incentive mechanisms help drive the management of the Company to proactively manage the transmission system availability across the period by focusing maintenance activities, which could lower transmission system availability, into those months with the lowest targets and related penalties or credits.

Principal regulatory, industry contracts and industry code matters (continued)

If the achieved transmission system availability is different to the target availability then there is a mechanism contained within the Licence that could potentially affect the Company's charges and hence its revenue in future periods. The Licence provides for adjustments to "base revenue" where the OFTO's system availability performance is different to the target system availability. If transmission system availability in any given period is in excess of the target availability level then credits are "earned" and if availability is less than target then penalties accrue. The Company is then permitted or required to change its prices to reflect the credits earned or penalties accrued as necessary. The maximum credit which the Company can "earn" and collect in charges amounts to around 5% of base revenue for that period and the maximum penalty that can be reflected in charges is around 10% of base revenue for that period. The detailed mechanism that is used to adjust charges to reflect these credits and penalties in charges is described below.

The penalties and credits are recorded on a monthly, but notional basis, during each charging period. Individual net monthly penalties are first offset against any brought forward net cumulative credits from the previous charging period. Thereafter, individual monthly net penalties are eligible for offset against credits arising in the current charging period. If at the end of any charging period there is a cumulative net credit, this net credit is eligible for collection in charges as an adjustment to charges at the beginning of the subsequent financial period following the end of the charging period in which the first credit arose. The maximum amount of credit that is eligible to be reflected in charges in the sixth financial preiod is the lesser of the credit that arose in the first charging period and the cumulative net credit outstanding at the end of the preceding charging period.

In respect of net penalties which are outstanding at the end of the charging period then, in principle, the charges in respect of the following financial period are lowered by an amount that would reduce the charges for that financial period by the amount of the net penalty. However, the reduction in charges can never exceed 10% of the base revenue for that period. To the extent that the cumulative net penalty, if applied, to the Company's charges would result in those charges being reduced by more than 10% of the base revenue for that period, the excess net penalty is carried forward on a cumulative and notional basis and aggregated with additional credits and penalties arising in the subsequent period. The maximum period that penalties relating to a particular charging period can be carried forward is five periods.

Principal regulatory, industry contracts and industry code matters (continued)

As a result of the arrangements described above, there are a number of risks that the Company faces that affect the level of transmission system availability and therefore affect potential incentive credits and penalties. The principal risks associated with transmission system availability stem from the following:

- 1) The inherent design of the transmission system e.g. system redundancy;
- 2) The management of maintenance activities so that the assets are maintained to good industry practice, and where possible, the Company seeks to carry out such maintenance without the need for planned outages whilst having regard to the safe operation of those assets; and
- 3) The management of planned outages of the transmission system having regard to the activities of other interested parties and to bias such outages towards those periods during the period, with the lowest system availability targets and related penalties or credits.

As the end of the 20 period Licence period approaches the agreed regulatory formula relating to the Company's ability to collect credits as explained above changes. There is an acceleration of the Company's ability to collect such credits in its invoicing and a corresponding acceleration in the Authority's ability to enforce penalties.

In certain circumstances, and in respect of certain costs, such as non-domestic rates relating to the Company's onshore electricity network and costs charged by the Authority associated with running the OFTO tender regime, the Company is permitted under the terms of its Licence to pass these costs to its customer by altering charges as required.

Transmission system capability (capacity)

As described above, the Company is incentivised to provide the maximum transmission system availability as is possible having regard to the safe running of the system. The maximum availability of the system is defined in the Licence and is expressed in megawatt hours ("MWhr").

Under the terms of the TOCA with NGET, the Company provides a transmission service on the basis of a declared maximum capacity of the transmission system. The declared maximum capacity for the period 1 April 2017 to 31 March 2018 was 300 MW, (2017: 300 MW). The practical significance of the declared maximum capacity is that the maximum declared capacity of the transmission system determines the maximum MWhr availability of the transmission system for the purpose of comparing with the Company's actual transmission availability during any performance period – which in turn determines the Company's performance credits or penalties as described under "Regulated revenue and incentives" earlier in this Operating and Financial Review.

The Company has provided 100% transmission capacity based on the declared maximum capacity of the transmission system during the performance period April 2017 to March 2018, (2017: 99.29%) – see "Transmission System Availability" below.

The Company minimises the risk of unexpected outages (and incurring related performance penalties) or incurring unexpected repair costs by carrying out appropriate maintenance in accordance with good industry practice.

Transmission system quality of supply

The STC sets out the minimum technical, design and operational and performance criteria that Offshore Transmission Owners must ensure that their transmission system can satisfy. For the Company's transmission system the most significant requirements are in respect of the reactive power capability, voltage control and the quality of the power (as measured by harmonic performance) deliverable at the connection point of the Company's transmission system with NGET's transmission system.

The Company has met its requirements to transmit electricity in accordance with the parameters agreed with NGET during the period under review.

Key performance indicators ("KPIs")

The Company has identified the following KPIs as being instrumental to the management of the transmission business. Such KPIs include financial and non-financial KPIs:

	Objective	Result		
Financial KPI's				
Profit/(loss) before taxation	To increase ¹ (n/a in first financial period)	Achieved: Profit of £1,100k, (2017: £3,216k)		
Cash available for debt service: Net cash inflow from operating activities plus net cash inflow from investing activities	To increase ² (n/a in first financial period)	Achieved: 2018: £17,080k (2017: £10,778k)		
Non- Financial KPI's	4444			
Maximise transmission availability: Making the transmission system available to transmit electricity over the performance period April 2017 to March 2018	To exceed the Licence target availability 98%.	Achieved: 2018: 100% (2017: 99.29%)		
Ensure that the quality of electricity at the export connection point is compliant with SQSS and the STC	To meet the standards set by the SQSS and the STC in relation to voltage control, reactive power and harmonic distortion.	Achieved: 2018: Compliant throughout the period. (2017: Achieved)		
ZIZEN IEDONADIE ENVIRONNIEMAI INCINENIS – I	To have zero health and safety accidents.	Achieved: 2018 no health and safety accidents and fully compliant with MMO licence. (2017: Achieved)		

¹ Where appropriate adjustments will be made where events give rise to unusual patterns of income, expenditure and/or one-off events.

² After adjustment for the initial acquisition cost of the OFTO assets.

The Company's operational performance

The Company's prime operational objectives are to maximise transmission system availability and to ensure that the quality of electricity at the onshore connection point is compliant with the SQSS and the STC having regard in all respects to the safety of employees, contractors and the general public.

In February 2014 the International Standards Organisation (ISO) published ISO 55000, this international standard has effectively overtaken and replaced PAS 55 as the Asset Management standard. Like all new standards there is a settling in period as industry seeks to understand the full implications of trying comply with the requirements of the standard, this has been the situation with ISO 55000. Some companies have moved to adopt ISO 55000 and some companies have kept with PAS 55. BBUS has sought to understand the essential requirements of ISO 55000 with a view to seeing how these can be applied to the OFTO environment, this has meant that the plans for adopting PAS 55 have been put on hold (possibly permanently). BBUS intended to evaluate the requirements of ISO 55000 during 2015 with a view to conducting a gap analysis in late 2015, unfortunately the impact of the faults that occurred in February 2015 and March 2016 has dominated the attention of the operational staff. There is an ongoing project to ensure BBUS will be better placed to identify what activities (if any) need to be amended / created in order to ensure compliance with the essential requirements of ISO 55000.

BBUS are continuing to undertake maintenance in accordance with manufacturer's recommendations for each type of asset. Maintenance activities have been successfully carried out in accordance with the Company's maintenance plans submitted to and approved by the Company. Two major outages took place, one on each of the offshore transformers, over the period May – August 2017. The reason for the outages was to allow TOWL to replace the transformer radiator fins in order to satisfy one of the requirements of the SPA that remained outstanding. These works were successfully completed and the OFTO was able to secure revenue cover as the Authority accepted that the works involved were a generator led outage.

Transmission system availability

MW hours		Performance Period		
		Apr 2017 to Mar 2018	Apr 2016 to Mar 2017	
	Note			
Maximum system availability (MWhrs)	(a)	2,628,000	2,628,000	
Actual system availability (MWhrs)		2,628,000	2,609,245	
Actual system availability (%)		100.00%	99.29%	
Regulatory target system availability		98%	98%	
Availability credits/(penalties) (MWhrs)				
Opening availability credits / (penalties)		~	-	
Net availability (penalties) /credits for the performance period				
Net availability (penalties) / credits at 31 March 2018 (31 March 2017)		_	-	

a) The maximum system availability of the Company's transmission system as declared to NGET during the performance period..

Quality of supply

The quality of supply constraints agreed with NGET (see "Transmission system quality of supply" above) requires the Company to transmit electricity within certain parameters in relation to: voltage control; reactive power; and harmonic distortion. A failure to meet these qualities of supply constraints could result in NGET requiring the Company's transmission system to be disconnected from NGET's electricity transmission system, resulting in loss of transmission availability and reduced incentive credits or performance penalties. The Company closely monitors compliance with these qualities of supply constraints and carries out appropriate maintenance activities consistent with good industry practice to allow the Company to meet these qualities of supply obligations.

During the financial period the Company has met its obligations to transmit electricity compliant with these operational obligations. The Company has continued to comply with these obligations through to the date of this report.

Health, safety, and environmental performance

The Board recognises that the nature of its business requires an exceptional focus on health, safety, and the environment. Safety is critical both to business performance and to the culture of the Company. The operation of the Company's assets gives rise to the potential risk that they could injure people and/or damage property if these risks are not properly controlled. Our objective is to eliminate or minimise those risks to achieve zero injuries or harm, and to safeguard members of the general public.

The Board is pleased to report that, during the period under review there were no health or safety incidents that required reporting under applicable legislation and that contractor "lost days" arising from safety incidents that required reporting under the Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 1995 were zero.

The Company is committed to reducing the environmental impact of its operations to as low as practically possible. The Company will do so by reducing the effect its activities have on the environment by: respecting the environmental status and biodiversity of the area where the Company's assets are installed; considering whole life environmental costs and benefits in making business decisions; looking for ways to use resources more efficiently through good design, use of sustainable materials, responsibly refurbishing existing assets, and reducing and recycling waste; and continually improving management systems to prevent pollution and to reduce the risk of environmental incidents.

The Board is pleased to report that during the period under review there were no environmental incidents or matters that required reporting to any relevant competent authority and that it had complied with the Marine licence obligations transferred under the Sale and Purchase Agreement ("SPA") by TOWL when the transmission assets were acquired by the Company.

Stakeholder relationships

The potentially hazardous nature of Company's operations and the environmentally sensitive nature of the locations where its assets are located require the Company to engage and communicate with a wide audience of stakeholders and to establish good relationships with them. As well as industry participants and local and national government bodies this audience includes: Port Authorities; the emergency services; the maritime community; environmental agencies and organisations; landowners and the general public. Accordingly the Company has established a shareholder matrix and implemented a stakeholder engagement and communications plan. The Directors consider that stakeholder relationships are satisfactory.

Principal risks and uncertainties

The Company recognises that effective risk management is fundamental to achieving its business objectives in order to meet its commitments in fulfilling the contract and in delivering a safe and efficient service. Risk management contributes to the success of the business by identifying opportunities and anticipating risks in order to enable the business to improve performance and fulfil its contractual obligations.

Financial risks

Credit and cash flow risks to the Company arise from its client, NGET. The credit and cash flow risks are not considered significant as the client as a quasi governmental organisation.

Contractual relationships

The Company operates within a contractual relationship with its principal customer, NGET. A significant impairment of this relationship could have a direct and detrimental effect on the Company's results and could ultimately result in termination of the concession. To manage this risk the Company has regular meetings with NGET.

Liquidity risk

The Company adopts a prudent approach to liquidity management by maintaining sufficient liquid resources to meet its obligations. Due to the nature of the project, cash flows are reasonably predictable and so this is not a major risk area for the Company.

Interest rate risk

The financial risk management objective of the Company is to ensure that financial risks are mitigated by the use of financial instruments where they cannot be addressed by means of contractual provisions. Financial instruments are not used for speculative purposes. Interest rate swaps are in place between 2015 and 2048 for notional principal amounts equating to the full value of the expected bank debt that is at a variable rate of interest to give an effective fixed interest rate payable on this debt.

The Company's financial performance

Summary:

The financial performance of the Company for the period ended 31 March 2018, and its financial position as at 31 March 2018, was satisfactory and is summarised below. In this report all numbers have been rounded to the nearest £1,000 where each £1,000 is represented by the symbol £k.

The Company reports its results in accordance with International Financial Reporting Standards ("IFRS") as adopted by the EU.

Operating Profit/(loss) Net finance income	2018 £'000s (1,924) 3,024	2017 £'000s (89) 3,305
Profit/(loss) before taxation Taxation	1,100 (542)	3,216 (521)
Profit/(loss) after taxation	558	2,695
	2018	2017
	£'000s	£'000s
Net cash inflow from operating activities and other investing activities	17,080	10,778

Operating and finance income

Revenue and finance income is derived from the Company's activities as a provider of transmission services. The vast majority of the Company's income is derived from NGET.

Finance income for the period amounted to £12,257k (2017: £12,335k), and effectively represents the finance income that would have been generated from an efficient stand-alone "transmission owner". The finance income has been recorded in accordance with the principal accounting policies adopted by the Company. A discussion of the critical accounting policies adopted by the Company is shown in the accounting policies section of the regulatory financial statements commencing on page 34.

Revenue for the period amounted to £4,213k (2017: £4,370k), and primarily represents the operating income that would be generated by an efficient provider of operating services to NGET, our principal customer. Such services include those activities that result in the efficient and safe operation of the transmission assets, and are reflective of the costs incurred in providing those services, including the cost of insuring those assets on behalf of a stand-alone transmission owner. Revenue has been recorded in accordance with the principal accounting policies adopted by the Company.

Operating costs

Operating costs for the period amounted to £6,137k (2017: £4,459k). The increase from 2017 is largely driven by increased insurance costs related to the cable breaks.

Operating (loss) / profit

Operating loss being the residual of operating income and operating costs amounted to £1,924k, (2017; £89k).

Other finance income

Other finance income of £29k, (2017: £21k) relates solely to interest earned on bank deposits.

Finance costs

Finance costs amounted to £9,233k, (2017: £9,030k). Funding was required to acquire the transmission system (Transmission owner asset) from TOWL and the acquisition of the Transmission owner asset took place on 17 December 2014.

The vast majority of the finance costs relates to the interest cost of servicing senior debt holders £6,625k, (2017: £6,881k), short term debt holders £Nil, (2017: £Nil) and holders of subordinated debt £2,605, (2017: £2,147k). Interest expense and other financial costs arise from the cost of debt used to finance the acquisition of the Transmission owner asset.

Taxation

The net taxation on profit/(loss) before taxation for the period is £542k, (2017: £521k) and relates solely to deferred taxation. There was no current taxation arising in the period (2017: £nil) as the Company incurred taxable losses.

A taxation charge of £1,275k, (2017: credit of £1,913k) has been recognised in other comprehensive income relating to pre-taxation losses arising on marking the Company's cash flow hedges to market at 31 March 2018.

The taxation credit relates solely to deferred taxation as the Company incurred taxable losses during the period. This taxation credit has been computed at 19% (2017: 20%).

Profit/(loss) after taxation

Profit/(loss) for the period after taxation amounted to £558k, (2017: £2,695k).

Cash flows

Net cash flows generated by / (used in) operations amounted to £17,051k, (2017: £10,757k) primarily reflecting the amounts invoiced to and received from NGET in relation to the provision of transmission services from 1 April 2017 through to 31 March 2018 (2017: 1 April 2016 to 31 March 2017) net of cash outflows relating to operating activities incurred during the period of operation from 1 April 2017 through to 31 March 2018.

Net cash flows generated by / (used in) investing activities amounted to £29k, (2017: £21k).

Cash available for debt servicing defined as net cash flows from operations less (or add) net cash flows used in (or generated from) investing activities (after adjustment for the exclusion of the cost of acquiring the Transmission owner asset) and includes interest income received of £29k (2017: £21k) amounted to £17,080k (2017: £10,778k). Net cash (used in) / generated from financing activities amounted to (£13,246)k (2017: £(13,594)k).

Payments to service senior debt holders during the period amounted to £4,013k (2017: £4,132k).

Payments to subordinated debt holders during the period amounted to £Nil (2017:£15k) .

No corporation tax was paid in the period, due to they carry forward of tax losses.

A dividend of £Nil (2017: £262k) was paid in the period.

Statement of Financial Position and consideration of financial management

Going concern

Having made enquiries, the Directors consider that the Company has adequate resources to continue in business for the foreseeable future, and that it is therefore appropriate to adopt the going concern basis in preparing the regulatory financial statements of the Company. More details of the Company's funding and liquidity position are provided under the headings "Current funding structure" and "Going concern, Liquidity and treasury management" below.

Statement of Financial Position

The Company's Statement of Financial Position at 31 March 2018 is summarised below:

•	Assets	Liabilities	Net assets / (liabilities)
	£'000s	£'000s	£'000s
Non-current Transmission owner asset	172,289	_	172,289
Non-current deferred taxation	1,831	-	1,831
Current assets and liabilities less borrowings	16,550	(10,301)	6,249
Total before non-current liabilities	190,670	(10,301)	180,369
Non-current liabilities	-	(191,424)	(191,424)
Totals at 31 March 2017	190,670	(201,725)	(11,055)
Totals at 31 March 2016	196,664	(214,502)	(17,838)

Transmission owner asset and decommissioning

The Transmission owner asset is a financial asset and is carried at the costs incurred, and directly attributable to the acquisition of the Thanet offshore transmission system at the date of acquisition, plus finance income less receipts attributable to the carrying value of that asset. The net result being that the carrying value of the Transmission owner asset reflects the application of the effective interest rate method, and is determined in accordance with the principal accounting policies adopted by the Company. A discussion of the critical accounting policies adopted by the Company that give rise to this balance is shown in the accounting policies section of the regulatory financial statements commencing on page 34.

The Transmission owner asset was acquired on 17 December 2014 from Thanet Offshore Wind Limited. The total costs of acquisition of this asset amounted to £178,954k. The latest estimate of the costs of decommissioning the Transmission owner asset at the end of its economic useful life in 2033 amount to £6,146k. These costs will be incurred from period 18 onwards.

Deferred taxation

The Company has recognised a deferred taxation liability of £1,145k which reflects the recognition, in full, of the deferred taxation impact of all temporary differences arising in the period, including taxable losses. This is netted off against a deferred tax asset of £2,976k, (2017: £4,251k) relating to pre-taxation losses arising on marking the Company's cash flow hedges to market at 31 March 2018.

Net debt

Net debt is defined as all borrowings (senior and subordinated debt) plus the carrying value of all financial derivative contracts that are marked to market (UK Retail Price Index (RPI) related swaps and Interest Rate swaps) less cash and cash equivalents.

At 31 March 2018 net debt stood at £186,384k, (2017: £201,731k) and included £17,503k, (2017: £25,003k) relating to the carrying value of financial derivatives that were marked to market at that date.

A discussion of the capital structure and the use of financial derivatives is provided below.

Current funding structure

The Company is funded through a combination of senior debt, subordinated debt and equity in accordance with the Directors' objectives of establishing an appropriately funded business consistent with that of a prudent offshore electricity transmission operator, and the terms of all legal and regulatory obligations including those of the Licence and the Utilities Act 2000.

Senior debt is comprised of Senior Term Loan and Short Term Loan borrowed in equal amounts from five different lenders (Sumitomo Mitsui Banking Corporation (SMBC), Unicredit Bank AG, The Bank Of Tokyo-Mitsubishi UFJ Ltd., Norddeutsche Landesbank Girozentrale and Credit Agricole Corporate and Investment Bank) and bear interest at a margin over LIBOR. All senior debt is serviced on a six monthly basis, the Senior Term Loan is expected to amortise over the life of the project through to December 2033, the Short Term Loan was repaid in full during the period. The total carrying value of the Loans outstanding at 31 March 2018 amounted to £158,274k (2017: £162,554k).

The loans are secured by fixed and floating charges over the undertaking, property, assets and rights of the Company and have certain covenants attached.

The subordinated loan ranks behind the senior debt and is held by Thanet OFTO Intermediate Limited. The subordinated loan was issued on a commercially priced basis, and carries a fixed rate coupon. At 31 March 2018 the total principal carrying value of the subordinated loan outstanding amounted to £20,625k (2017: £20,625k).

Ordinary equity share capital amounted to £1 at 31 March 2018 (2017: £1).

Going concern, liquidity, and treasury management

As indicated previously, the Directors have confirmed that they have sufficient evidence to support their conclusion that the Company is a going concern, and has adequate resources in the foreseeable future to meet its on-going obligations, including the servicing of bond holders, as those obligations fall due. This conclusion is based on a number of factors which are summarised below.

The expected cash in-flows that are likely to accrue to the Company over the foreseeable future from its electricity transmission operations are highly predictable, and will not fall below a certain level as explained above under "Regulated revenue and incentives". In addition, NGET, as a condition of its regulatory ring-fence is required to use its reasonable endeavours to maintain an investment grade credit rating and, therefore, the likelihood of payment default by NGET considered to be very low. As at 31 March 2018 there were no sums outstanding from NGET and from 31 March to the date of this report all amounts due from NGET had been received on time.

The Company enjoys certain protections afforded under the Licence granted to the Company. In particular, provided that the Company can demonstrate that it has applied good industry practice in the management of the Company and its assets, then in the event that an unforeseeable incident results in the Company (in so far as it relates to its activities under the Licence) it can apply to the Authority and seek to recover the lost amount.

The Company has also put in place prudent insurance arrangements primarily in relation to property damage such that it can make claims in the event that an insurable event takes place and thereby continue in business.

Having incurred two cable breaks during operations in previous years, one offshore and one onshore, the Company is determined they will remain a going concern into the forseeable future for the following reasons:

- a) The Company is able to meet all debt repayments
- b) There is a 10% revenue cap meaning revenue streams will remain
- c) Insurance recovery and income adjusting claims are in progress
- d) Sufficient cash reserves

The licence protections together with the insurance arrangements reduce uncertainties and address certain risks regarding loss/destruction of assets that arise from remote and/or catastrophic events.

The Company has also entered into certain hedging and other contractual arrangements that have been put in place to achieve a high degree of certainty (and thereby reduce uncertainty) as to the likely cash out-flows that are expected to occur over the life of the project.

The hedging arrangements are explained in more detail below under "Hedging arrangements". In summary the RPI swaps have the impact of effectively converting a proportion of the RPI variable cash flows arising from the Company's transmission services activities into a known series of cash flows over the life of the project and the Interest Rate swaps are minimising the risk of changing LIBOR in connection with Senior debt interest payments.

Other contractual arrangements with third parties have been entered into that have a pricing mechanism that features linkages to RPI or other indices, which has the effect of reducing the uncertainty as to the quantum and frequency of cash outflows arising. As a consequence, it is the opinion of the Directors that the costs and related cash flows associated with these arrangements are more likely than not to vary in a similar manner with the principal cash inflows generated by the Company in relation to its transmission services that are not subject to the RPI swaps arrangements.

The Company also has access to a liquidity facility of £3,300k (2017: £3,300k) that the Company can access in the event that it has an insurable or income adjusting event.

Credit rating

It is a condition of the regulatory ring-fence around the Company that it uses reasonable endeavours to maintain an investment grade credit rating in respect of its senior debt. The rating agency carries out regular and periodic reviews of the rating. The Company has maintained an investment grade credit rating in respect of its senior debt consistent with its obligations under the licence.

During the rating agency's assessment of the Company's credit rating, amongst other matters, the rating agency will and has considered: actual and expected cash flows over the term of the project; the regulatory environment within which the Company operates; the nature of the principal contractual arrangements in place; the insurance arrangements; and the credit risk of all material counterparties in arriving at their assessment of the appropriate credit rating.

It is the Directors' assessment, that having regards to the principal risks and uncertainties regarding cash flows, the creditworthiness of counterparties, the regulatory environment, the insurance arrangements and other matters that are discussed in this Operating and financial review, that there are reasonable grounds to believe that the rating agency will continue to confirm that the Company's loans are investment grade status in the foreseeable future based on the information available to the Directors at the date of this annual report.

On-going funding requirements

The Company does not expect to have any significant funding requirements over the expected life of the project that will require additional external funding. Debt servicing and other obligations of the Company are expected to be met by the cash inflows generated by the Company. Consequently, based on the current capacity of the existing transmission system operated by the Company, there is minimal refinancing risk.

To the extent that a requirement for significant expenditure is required in the future as a result of additional capital works being required to provide incremental transmission capacity, there is a mechanism in the Company's transmission licence to allow the Company to increase its charges in respect of such expenditure. The Directors would expect that such additional expenditure would be capable of being funding based on the increased cash flows arising from such additional expenditure. No such additional expenditure is planned or expected in the foreseeable future.

Surplus funds

The Company invests surplus funds in term deposits with banks that have a short term senior debt rating of at least A-1 or better issued by Standard & Poor's, or P-1 or better issued by Moody's. At 31 March 2017, the Company had £nil (2016: £nil) on deposit of which £nil (2016: £nil) was held in bank accounts that restrict the use of the monies contained in those accounts for specific purposes. Cash and cash equivalents include amounts of £12,406k (2016: £8,572k) that the Company can only use for special purposes and with the consent of the Company lenders. The Common Terms Agreement ("CTA") defines the requirements to transfer in and withdraw funds from these accounts. If the request is not defined in the CTA the consent of the Company's lenders is required prior to use, but is held for general corporate purposes. A description of the restrictions applied to certain deposits and other matters are referred to below under "Lending covenants and other restrictions".

The Company has some variability of cash flows in relation to the interest it earns on its investments, as typically these investments are held in deposits with a typical maturity of six months or less and earn variable rates of interest. However, in the context of the other cash flows generated by the Company these amounts are insignificant.

Hedging arrangements

General

It is the policy of the Board that the Company will only enter into derivative financial instruments for the purpose of hedging an economic risk. No derivative financial instruments will be entered into unless there is an underlying economic position to be hedged. No speculative positions are entered into.

Interest Rate swaps

The Company has entered into five arrangements with third parties for the purpose of minimising the risk of changing LIBOR regarding the Senior Term Loan interest payments with the final payment date expected on 16 December 2033. This arrangement meets the definition of a derivative financial instrument. The period covered by these arrangements closely matches the period over which the Company enjoys exclusive rights to operate the offshore transmission system under the Licence, and closely reflects the period over which the majority of cash flows from the project are expected to be generated.

RPI swaps

The Company has entered into four arrangements with third parties for the purpose of exchanging the majority (approximately 63.5%) of variable cash inflows arising from the electricity transmission service it provides to NGET in exchange for a pre-determined stream of cash inflows with the final payment date expected on 16 December 2033. This arrangement meets the definition of a derivative financial instrument. The period covered by these arrangements closely matches the period over which the Company enjoys exclusive rights to operate the offshore transmission system under the Licence, and closely reflects the period over which the majority of cash flows from the project are expected to be generated.

As previously described (see "Regulated revenue and incentives"), under the terms of the Licence, regulatory and other contractual agreements, the Company is permitted to charge its customer, NGET, an agreed amount for the transmission services it provides, the price of which is uplifted each period commencing 1 April by a sum equivalent to the average increase in RPI over the previous 12-month period measured from January to December. Where there is a reduction or no increase in RPI over the relevant period, then the charges remain unchanged from the previous period. These derivative arrangements ("RPI swaps") have the effect of exchanging the vast majority of variable cash inflows derived from the Company's transmission services (impacted by changes in actual RPI) in exchange for a known and predetermined stream of rising cash flows over the same period.

The Directors believe that the use of these Interest Rate and RPI swaps is consistent with the Company's risk management objective and strategy for undertaking the hedge. The majority of the Company's cash outflows relate to borrowings that effectively carry a fixed coupon so that both the resultant principal repayments and coupon payments are predetermined. The purpose of the RPI swap arrangements is to generate highly certain cash inflows (thereby reducing uncertainty) so that the Company can meet its obligations under the terms of the Company's borrowing arrangements and therefore reduce the risk of default. The Directors believe that RPI swaps have a highly effective hedging relationship with the forecast cash inflows that are considered to be highly probable, and as a consequence have concluded that these derivatives meets the definition of a cash flow hedge and have formally designated them as such.

The carrying value of the RPI swaps liability at 31 March 2018 was £6,160k (2017: £8,367k) and the Interest Rate swaps liability at 31 March 2018 was £11,342k (2017: £16,636k). A corresponding entry has been recorded in other comprehensive income.

Lending covenants and other restrictions

The Company is subject to certain covenants and conditions under lending agreements with the senior debt holders. The Company entered into the lending agreements to allow it to fund the acquisition of the Transmission owner asset. Under these lending agreements, a Security Trustee has been appointed to represent the senior debt holders and to monitor compliance by the Company with the conditions of the lending agreements it has entered into. In addition, a Technical Adviser and an Insurance Adviser have also been appointed under the terms of the lending agreements to support the Security Trustee in the discharge of their duties. The covenants and conditions of the lending agreements include (but are not limited to) the following:

- 1) The Company is required to operate on the basis of a financial plan while the lending agreements are in place (20 periods) which the Security Trustee has approved and subject to certain allowances; any deviation from that plan requires the approval of the Security Trustee. The financial plan is refreshed on a six monthly basis and revised on an annual basis as required;
- 2) The Company is required to deliver financial and other information at specified intervals (typically six monthly) to the Security Trustee;
- 3) The lending agreements specify the bank accounts that the Company is permitted to operate and in addition, restrict the way in which those accounts should be operated this includes, in respect of certain accounts, requiring those accounts to be funded for specific purposes and only allowing access to those accounts for that specified purpose. With the exception of one bank account, all withdrawals from bank accounts require the consent of the Security Trustee;
- 4) The Company is required to maintain certain financial ratios (both historical and forward looking) in respect of debt service cover; loan life cover; and in respect of incremental investments it cannot exceed a specified gearing ratio;
- 5)The Company is restricted under the lending agreements as to its ability to invest its surplus funds such that it is only permitted to invest those surplus funds in investments with maturities that are allowed under the terms of those agreements. Typically this results in the Company investing in term deposits with maturities not exceeding six months;
- 6) The Company is required to maintain adequate insurances at all times;
- 7)The Company is required to meet all the conditions contained within the lending agreements before any servicing of the subordinated debt holders can take place or any distributions can be made to shareholders.

There is a risk that if the Company materially fails to comply with the terms of the lending agreements, or has failed to apply one of the specified remedies, the Company would be in default of the lending agreements. In these circumstances the amounts due under the lending agreements are immediately due and payable or are repayable on demand. The Company monitors and has put in place controls and procedures to ensure material compliance with the terms of the lending agreement at all times.

Since entering into the lending agreements the Company has met with all of the lending covenants and conditions and has continued to do so through to the date of this report.

Accounting policies

The regulatory financial statements present the results of the Company using the accounting policies outlined in the regulatory financial statements and are in accordance with International Financial Reporting Standards (IFRS) as endorsed by the European Union. IFRS permits certain choices and the following material choices have been made as follows:

Presentation of regulatory financial statements

The Company uses the nature of expense method for the presentation of its Income Statement and presents its Statement of Financial Position showing net assets and total equity.

In the Income Statement the Company presents a sub-total of operating profit, being the total of operating income, finance income and operating costs.

Financial Instruments

The Company has elected to apply hedge accounting to its derivative financial instruments, where it is allowable under the relevant standards.

Critical accounting policies

The application of accounting principles requires the Directors of the Company to make estimates, judgements, and assumptions that are likely to affect the reported amounts of assets, liabilities, revenue, and expenses, and the disclosure of contingent assets and liabilities in the regulatory financial statements. Better information, or the impact of an actual outcome, may give rise to a change as compared with any estimates used, and consequently the actual results may differ significantly from those estimates. The impact of revised estimates, or the impact of actual outcomes, will be reflected in the period when the better information or actual outcome is known.

A discussion of critical accounting policies is contained within the accounting policies section of the regulatory financial statements together with a discussion of those policies that require particularly complex or subjective decisions or assessments. The accounting policies section of the regulatory financial statements commences on page 34.

Directors' Report

The Directors present their Report together with the audited regulatory financial statements for the year ended 31 March 2018.

The following information has been disclosed in the Company strategic report:

- · Principal activities and business review
- Indication of likely future developments in the business
- Key performance indicators
- · Principal risks and uncertainties
- · The use of financial instruments

Returns and dividends

The Company recorded a profit for the year after taxation of £558k (2017: £2,695k).

No dividend was paid during the year (2017: £262k).

Share Capital

The issued share capital of the Company at 31 March 2018 was £1,000 consisting of 1,000 ordinary shares of £1 each.

Directors

The Directors serving throughout the year and subsequently (unless otherwise indicated) were:

Rebecca Collins
Sion Laurence Jones - resigned 21/12/2017
Brian Roland Walker
Simon Rooke- resigned 2/8/2017
John Sinclair - appointed 2/8/2017
Nathan Wakefield - appointed 21/12/2017

No Director has any interest in the issued share capital of the Company or the Company's parent undertaking.

Donations and research and development

No charitable or political donations were made during the year (2017 : £nil) and expenditure on research and development activities was £nil (2017 : £nil).

Financial instruments

Details on the use of financial instruments and financial risk management are included on pages 16 to 18 in the Operating and financial review.

Going concern

Having made enquiries, the Directors consider that the Company has adequate resources to continue in business for the foreseeable future, and that it is therefore appropriate to adopt the going concern basis in preparing the regulatory financial statements of the Company. More details of the Company's funding and liquidity position are provided in the Operating and financial review under the headings "Current funding structure" and "Going concern, liquidity and treasury management".

Directors' Report

The Company's strategy, long term business objectives and operating model

The Company's strategy, long term business objectives and operating model are set out in the Operating and financial review and includes an explanation of how the Company will generate value over the longer term.

Employee involvement

The Company does not have any employees, and does not expect to engage any employees in the foreseeable future – see "The Subsidary's Operating Model" in the Operating and financial review on page 4.

Supplier payment policy

The Company's policy is to settle terms of payment with suppliers when agreeing the terms of each transaction, ensure that suppliers are made aware of and abide by the terms of the payment. Trade creditors of the Company at 31 March 2018 were equivalent to 43 (2017: 120) days' purchases, based on the average daily amount invoiced by suppliers during the year.

Company Information

Thanet OFTO Limited is incorporated in Great Britain, registered in England and Wales and domiciled in the United Kingdom.

Company Secretary and Registered Office

The Company Secretary is Peter Davison. The registered address is 6th Floor, 350 Euston Road, Regent's Place, London, NW1 3AX.

Provision of Information to the Auditor

Each of the persons who is a Director at the date of approval of this report confirms that:

- (i) so far as the Director is aware, there is no relevant audit information of which the Company's auditor is unaware; and
- (ii) the Director has taken all the steps that he ought to have taken as a Director in order to make himself aware of any relevant audit information and to establish that the Company's auditor is aware of that information

This confirmation is given and should be interpreted in accordance with the provisions of s418 of the Companies Act 2006.

Pursuant to Section 487 of the Companies Act 2006, the auditor will be deemed to be reappointed and KPMG LLP will therefore continue in office.

This report was approved by the board on JoJuly 2018 and signed by its order.

Corporate governance statement

The Company is required by its Licence obligations to include within its regulatory financial statements a corporate governance statement which describes how the principles of good corporate governance have been applied and which has the same content as the statement a listed Company is required to prepare.

As a Subsidiary undertaking of Thanet OFTO Holdco Limited ("TOHL") the Company operates within the corporate governance framework of TOHL and its Subsidiary undertakings ("the Group"). Consequently, an understanding of the Group's governance framework is required to understand the Company's position within that framework.

Appointments to the Board of Directors of TOHL and its Subsidiary undertakings are governed by a shareholders' agreement ("the Agreement") between the two shareholders of TOHL that jointly control this Company through a common class of ordinary shares, Balfour Beatty OFTO Holdco Limited and Equitix Infrastructure 3 Limited. The Agreement requires that all Boards within the Group must comprise four Directors, with two Directors appointed by each shareholder. Consequent upon these arrangements between the shareholders, no Group Company has a nomination committee and the performance of the Boards is not evaluated.

The Agreement ensures that Boards are balanced, with no one shareholder having majority representation, and allows the Group to draw on the respective financial and operational expertise of each of its shareholders. Accordingly, the Directors have the relevant expertise and experience, drawn from their involvement in a wide range of infrastructure companies, to define and to develop the strategy of the Company so as to meet its objectives and to generate or preserve value over the longer term. The Directors regularly review the effectiveness of the Group's risk management and internal control framework and are satisfied that they are effective.

TOHL

Meetings of the Board of TOHL

TOHL is governed by a Board of four executive Directors. There are no non-executive or independent Directors. The TOHL Board does not have a separately appointed chairman. Meetings are chaired by a member of the TOHL Board and are convened as required, but usually not less than four times per annum. The TOHL Board is accountable to the shareholders of TOHL for the good conduct of the Company's affairs.

Registered number:

07343534

Corporate governance statement

Audit committee

The Company does not have an internal audit function or Audit Committee as the Directors have concluded that the cost of such a functions would be disproportionate to the benefits. Duties normally fulfilled by an Audit Committee are fulfilled by the board and include the following.

- a) monitoring the integrity of financial and financial regulatory reports issued by TOHL and its two Company undertakings with the objective of ensuring that these reports present a fair, clear, and balanced assessment of the position and prospects of the Company, as the case may be;
- b) reviewing the economy, efficiency and effectiveness of the Company's operations and internal controls, the reliability and integrity of information and accounting systems, and the implementation of established policies and procedures;
- c) reviewing and approving the internal control and risk management policies applicable to the Company;
- d) maintaining an appropriate relationship with the external auditor; and
- e) ensuring that audit objectivity and independence is maintained.

The Company

Board and management meetings

The Company is governed by a Board of four non-executive Directors, none of whom are independent. The Board does not have a separately appointed chairman. Meetings are chaired by a member of the Board and are convened as required, but usually not less than four times per annum. The Company Board is responsible for monitoring the effectiveness of the day-to-day operation and management of the Company's regulated transmission business.

The Company's operating model is to outsource all O&M activities and asset management capability. BBI provides certain financial and management services to the Company through a PSA. Additional technical, accounting and administration support is provided to the Company by BBI through the PSA.

Directors and their attendance at Company Board meetings

The Directors of the Company are as shown below. Board meetings were held on seven occasions during the year under review. Attendance by the Directors at Board meetings, expressed as a number of meetings attended out of a number eligible to attend are shown below.

Rebecca Collins	3 of 4
Sion Laurence Jones	2 of 4
Brian Roland Walker	3 of 4
Simon Rooke	1 of 4
Nathan Wakefield	2 of 4
John Sinclair	3 of 4

Registered number: 07343534

Corporate governance statement

Compliance committee

The Company has a Compliance Committee. The Compliance Committee is a permanent internal body having an informative and consultative role to fulfil the compliance requirements of the Licence, without executive functions, with powers of information, assessment, and presentations to the Board. Following consultation with the Gas and Electricity Markets Authority, on 17 December 2015 the Board appointed Henderson Loggie as Compliance Officer. Henderson Loggie is not engaged in the management or operation of the Company's Licensed transmission business system, or the activities of any associated business. The Compliance Officer is required to report to the Compliance Committee and the Boards of the Company at least once annually.

The principal role of the Compliance Officer is to provide relevant advice and information to Directors of the Company, the compliance committee and consultants and other third parties providing services to the Company. The Compliance Officer is required to facilitate compliance with the Licence as regards the prohibition of cross subsidies; restriction of activities, and financial ring fencing; the conduct of the transmission business and restriction on the use of certain information. In addition, the Compliance Officer is required to monitor the effectiveness of the practices, procedures and systems adopted by the Company in accordance with the compliance statement required by amended standard condition E12 - C2 of the Licence (Separation and Independence of the Transmission Business).

Members of the Compliance Committee and their attendance, expressed as a number of meetings attended out of a number eligible to attend during the year under review was as follows:

Rebecca Collins 1 of 1 Simon Rooke 1 of 1

The compliance committee met in July 2018 to receive the compliance report for the year ended 31 March 2018 from the compliance officer and in turn produced a report approved by the Board.

Compliance statement

The Company has published a compliance statement and code of conduct "Separation and Independence of the Transmission Business Compliance Statement" (copy available from http://thanetofto.co.uk) at addresses how the Company has addressed its Licence obligations.

Health, Safety and Environment

The Board recognises that the nature of the Company's business requires an exceptional focus on health, safety and the environment (HSE). The OFTO General Manager provides the Board with a monthly report that shows HSE performance through the month and year to date. In addition, the monitoring of HSE issues relating to the OFTO has been kept under routine review as part of the monthly Economic Infrastructure Support Services meetings, chaired by Brian Walker, the OFTO's HSE Director.

The OFTO is also part of an HSE forum with some other OFTOs to provide a mechanism for sharing and learning. The HSE Forum meets quarterly.

This report was approved by the board on 3° July 2018 and signed by its order.

Directors' Responsibilities Statement

The Directors are obliged by Standard Condition E2 of the Licensee's Transmission Licence to prepare regulatory accounts for each financial year which comply with the requirements set out in Standard Condition E2, as amended by consents received from Ofgem (the 'Requirements'). Under the Requirements, the Directors have responsibility for ensuring that:

- the Company and related undertakings keep accounting records and other records as are necessary so that the revenues, costs, assets, liabilities, reserves, and provisions that are reasonably attributable to the transmission business and are separately identifiable in the accounting records of the Licensee from those of any other business;
- the regulatory accounts are prepared on a consistent basis from such accounting records in respect of each financial year and, so far as reasonably practicable the regulatory accounts and information in respect of a financial year have the same content and format as the most recent statutory accounts of the Company and Licensee;
- the regulatory accounts include for the transmission business and in total, an Income Statement, a Statement of Comprehensive Income, a Statement of Financial Position, a Statement of Changes in Equity, a Statement of Cash Flows, including notes thereto and statement of accounting policies adopted;
- the regulatory accounts include, for the transmission business, a Corporate Governance Statement, a Directors' Report and an Operating and Financial Review; and
- the regulatory accounts show separately and in appropriate detail the amounts of any revenues, costs, assets, liabilities, reserves or provisions that have been charged from or to any other business of the ultimate controlling parties (other than the Company or Licensee), or that have been determined by apportionment or allocation, where they relate to goods or services received or supplied for the purposes of the transmission business.

In addition, in preparing the regulatory accounts, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgements and accounting estimates that are reasonable and prudent;
- state whether they have been prepared in accordance with IFRSs as adopted by the EU; and
- prepare the regulatory accounts on the going concern basis unless it is inappropriate to presume that the Company will continue in business.

The Directors are responsible for keeping proper accounting records that disclose with reasonable accuracy at any time the financial position of the Company and enable them to ensure that the regulatory accounts comply with Standard Condition E2 of the Electricity Transmission Licence as applicable. They have general responsibility for taking such steps as are reasonably open to them to safeguard the assets of the company and to prevent and detect fraud and other irregularities.

Each of the Directors, whose names are listed in the Directors' report on page 21, confirms that, to the best of their knowledge:

- the regulatory accounts have been prepared in accordance with the Requirements and fairly present the assets, liabilities and financial position of the Company's electricity transmission business.
- the regulatory accounts are prepared on a going concern basis, under the historical cost convention and in accordance with the Companies Act 2006 and applicable UK accounting standards.

Independent Auditor's report to the Director General, the Gas and Electricity Markets Authority ('the Regulator') and the directors of Thanet OFTO Limited

We have audited the Regulatory Accounts of Thanet OFTO Limited ('the Company') for the year ended 31 March 2018 which comprise the Income Statement, the Statement of Comprehensive Income, the Statement of Financial Position, the Statement of Changes in Equity, the Statement of Cash Flows and the related notes to the Regulatory Accounts. The financial reporting framework that has been applied in their preparation is condition E2 of the Company's Regulatory Licence and the accounting policies set out in note 1.

This report is made, on terms that have been agreed, solely to the Company and the Regulator in order to meet the requirements of the Regulatory Licence. Our audit work has been undertaken so that we might state to the Company and the Regulator those matters that we have agreed to state to them in our report, in order (a) to assist the Company to meet its obligation under the Regulatory Licence to procure such a report and (b) to facilitate the carrying out by the Regulator of its regulatory functions, and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Company and the Regulator, for our audit work, for this report or for the opinions we have formed.

Respective responsibilities of the Directors and Auditor

As explained more fully in the Directors' Responsibility Statement set out on page 26, the directors are responsible for the preparation of the Regulatory Accounts.

Our responsibility is to audit and express an opinion on the Regulatory Accounts in accordance with International Standards on Auditing (UK and Ireland), except as stated in the 'Scope of the audit of the Regulatory Accounts' section below and having regard to the guidance contained in ICAEW Technical Release TECH 02/I6MF Reporting to regulators on regulatory accounts. Those standards require us to comply with the Auditing Practices Board's Ethical Standards for Auditors.

Scope of the audit of the Regulatory Accounts

An audit involves obtaining evidence about the amounts and disclosures in the Regulatory Accounts sufficient to give reasonable assurance that the Regulatory Accounts are free from material misstatement, whether caused by fraud or error. This includes an assessment of: whether the accounting policies are appropriate to the Company's circumstances and have been consistently applied and adequately disclosed and the reasonableness of significant accounting estimates made by the directors. In addition, we read all the financial and non-financial information in the Regulatory Report and Accounts to identify material inconsistencies with the audited Regulatory Accounts and to identify any information that is apparently materially incorrect based on, or materially inconsistent with, the knowledge acquired by us in the course of performing the audit. If we become aware of any apparent misstatements or inconsistencies we consider the implications for our report.

We have not assessed whether the accounting policies are appropriate to the circumstances of the Company where these are laid down by condition E2 of the Company's Regulatory Licence. Where condition E2 of the Company's Regulatory Licence does not give specific guidance on the accounting policies to be followed, our audit includes an assessment of whether the accounting policies adopted in respect of the transactions and balances required to be included in the Regulatory Accounts are consistent with those used in the preparation of the statutory financial statements of the Company. Furthermore, as the nature, form and content of Regulatory Accounts are determined by the Regulator, we did not evaluate the overall adequacy of the presentation of the information, which would have been required if we were to express an audit opinion under International Standards on Auditing (UK and Ireland).

Opinion on Regulatory Accounts

In our opinion the Regulatory Accounts have been properly prepared in accordance with condition E2 of the Company's Regulatory Licence and the accounting policies set out in note 1.

Emphasis of matter - basis of preparation

Without modifying our opinion, we draw attention to the fact that the Regulatory Accounts have been prepared in accordance with conditions E2 of the Company's Regulatory Licence and the accounting policies set out in the statement of accounting policies. The nature, form and content of Regulatory Accounts are determined by the Regulator. It is not appropriate for us to assess whether the nature of the information being reported upon is suitable or appropriate for the Regulator's purposes. Accordingly we make no such assessment.

The Regulatory Accounts are separate from the statutory financial statements of the Company and have not been prepared under the basis of International Financial Reporting Standard as adopted by the European Union ('IFRS'). Financial information other than that prepared on the basis of IFRS does not necessarily represent a true and fair view of the financial performance or financial position of a Company as shown in statutory financial statements prepared in accordance with the Companies Act 2006.

Independent Auditor's report to the Director General, the Gas and Electricity Markets Authority ('the Regulator') and the directors of Thanet OFTO Limited

Matters on which we are required to report by exception

We have nothing to report in respect of the following matters where under ISAs (UK and Ireland), we are required to report to you if, in our opinion, the information given in the Operating and financial review, the Directors' report and Corporate governance statement is:

- materially inconsistent with the information in the audited Regulatory Accounts; or
- apparently materially incorrect based on, or materially inconsistent with, our knowledge of the Company acquired in the course of performing our audit; or
- · otherwise misleading.

Other matters

Our opinion on the Regulatory Accounts is separate from our opinion on the statutory financial statements of the Company for the year ended 31 March 2017 on which we reported on July 2018, which are prepared for a different purpose. Our audit report in relation to the statutory financial statements of the Company (our 'Statutory audit') was made solely to the Company's members, as a body, in accordance with Chapter 3 of Part 16 of the Companies Act 2006. Our Statutory audit work was undertaken so that we might state to the Company' members those matters we are required to state to them in a statutory audit report and for no other purpose. In these circumstances, to the fullest extent permitted by law, we do not accept or assume responsibility for any other purpose or to any other person to whom our Statutory audit report is shown or into whose hands it may come save where expressly agreed by our prior consent in writing.

Thanet OFTO Limited Notes to the regulatory financial statements for the year ended 31 March 2018

1 Summary of significant accounting policies

A Basis of preparation

These regulatory financial statements have been prepared in accordance with standard condition E2 of the licence and IFRS as issued by the IASB and as adopted by the European Union. They are prepared on the basis of all IFRS accounting standards and interpretations that are mandatory for the year ended 31 March 2017, and in accordance with the Companies Act 2006 applicable to companies reporting under IFRS. The regulatory financial statements have been prepared on an historical cost basis except for the revaluation of derivative financial instruments. The regulatory financial statements are presented in pounds sterling, which is the functional currency of the Company and are rounded to the nearest £1,000.

The preparation of regulatory financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, disclosures of contingent assets and liabilities and the reported amounts of revenue and expenses during the reporting period. Actual results could differ from these estimates, as referred in section J, Critical accounting judgements, key assumptions and sources of estimation uncertainty on page 38.

B Going Concern

The current economic conditions create some general uncertainty. The Directors have reviewed the Company's supply chain and do not believe that any specific risk has been identified. The Directors have also considered the ability of the Authorities to continue to pay unitary fees due under the concession contract to the Company's Company and do not consider this to be a material risk. The Company's forecasts and projections, taking account of reasonably possible counterparty performance, show the Company expects to be able to continue to operate for the full term of the concession. Accordingly, they continue to adopt the going concern basis in preparing the annual report and regulatory financial statements.

The Company is in a net liabilities position as at 31 March 2018 due to the fair value of the interest rate swaps. The directors have reviewed the Company's forecasts and projections, taking into account future cash requirements and forecast receipts, which show that the Company can continue to meet its debts as they fall due.

C Transmission availability arrangements

The Company owns and operates an electricity transmission network that is principally offshore based. This network electrically connects a wind farm generator to the onshore electricity transmission operator (NGET). The ownership of this transmission network is subject to regulatory and contractual arrangements that permit it to charge for making its transmission network available ("transmission availability charges") to the wind farm generator thereby allowing the wind farm generator to transmit its electricity.

The characteristics of the regulatory, legal and contractual arrangements that give rise to the transmission availability charges referred to above are consistent with the principles contained within IFRIC 12, an interpretation issued by the IFRS Interpretations Committee. Consequently, the accounting for charges made by the Company for transmission network availability is consistent with that interpretation.

The major characteristics that result in the application of IFRIC 12 include the following:

- the regulatory arrangements determine the price charged by the Company for its transmission availability services; and
- the regulator has granted a licence to operate the transmission system for an exclusive period of around 20 years and retains the rights to grant a transmission licence to a future operator.

C Transmission availability arrangements (continued)

A Transmission owner asset has been recognised at cost in accordance with the principles of IFRIC 12. The Transmission owner asset includes: the cost of acquiring the Transmission network asset from the constructor of the network; and those costs incurred that are directly attributable to the acquisition of the transmission network. Decommissioning costs will be a service provided at the end of the contract under the terms of the contract and were factored into the pricing of the contract, as such they have been treated as a revenue generating activity under IFRIC 12 and costs will therefore be recognised as incurred, as opposed to being under the scope of IAS 37. The Transmission Owner asset has been classified as a financial asset and is accounted for as described below – see E – Financial Instruments.

In accordance with IFRIC 12, transmission availability charges are recognised in the regulatory financial statements in three ways:

- as an adjustment to the carrying value of the Transmission owner asset see D. Financial Instruments below;
- as finance income see H. Operating and finance income below;
- as operating income see H. Operating and finance income below.

Transmission availability payments are recognised at the time the transmission service is provided.

The value of amounts invoiced for transmission availability services in any one year is determined by a regulatory agreement that allows the transmission system operator to invoice an amount primarily relating to the expected availability of the transmission system during that year, together with the recovery of certain costs. Where the level of availability of the transmission system or the costs that are permitted to be recovered is different to that expected this might result in an adjustment to charges in a subsequent accounting period. Such potential adjustments to future charges are not recognised in the regulatory financial statements as assets or liabilities, until as such time as prices are changed to reflect these adjustments and, consequently, there is no impact on the Income Statement until such time as prices are changed.

D Financial instruments

Financial assets, liabilities, and equity instruments are classified according to the substance of the contractual arrangements entered into, and recognised on the trade date.

Trade and loan receivables, including time deposits and demand deposits, are initially recognised at fair value and subsequently measured at amortised cost, less any appropriate allowances for estimated irrecoverable amounts. A provision is established for irrecoverable amounts when there is objective evidence that amounts due under the original payment terms will not be collected. Indications that the trade or loan receivable may become irrecoverable would include financial difficulties of the debtor, likelihood of the debtor's insolvency, and default or significant failure of payment.

Trade payables are initially recognised at fair value and subsequently measured at amortised cost.

The Transmission owner asset is classified as a financial instrument and is carried at amortised cost using the effective interest rate method reflecting adjustments to its carrying value as referenced above – see B. Transmission availability arrangements. The annual revenue is agreed upfront with the client including the RPI uplift per the licence. The maximum credits available are 5% and penalties available are 10% of base revenue for that year which is shared. Due to the nature of the contractual arrangements the projected cash flows can be estimated with a high degree of certainty. Finance income relating to the Transmission owner asset is recognised in the Income Statement as a separate line item – "Finance income", see G. Operating and finance income below.

Borrowings, which include fixed interest-bearing debt, are recorded at their carrying value which reflects the proceeds received, net of direct issue costs. Derivative financial instruments are recorded at fair value, and where the fair value of a derivative is positive, it is carried as a derivative asset and, where negative, as a derivative liability. Gains and losses arising from the changes in fair value are included in other comprehensive income in the period they arise.

No adjustment is made with respect to derivative clauses embedded in financial instruments or other contracts that are closely related to those instruments or contracts.

There are no embedded derivatives in host contracts that are not considered to be closely related; consequently, no embedded derivatives are separately accounted for as derivative financial instruments.

E Hedge accounting

The Company has entered into an arrangement with third parties that is designed to hedge future cash receipts arising from its activities as a provider of transmission availability services (RPI swaps) and to minimise the risk of changing LIBOR in connection with the Senior Term loan interest payments (Interest Rate swaps). The Company has designated that this arrangement is a hedge of another (non-derivative) financial instrument, to mitigate the impact of potential volatility on the Company's net cash flows.

To qualify for hedge accounting, documentation is prepared specifying the hedging strategy, the component transactions and methodology used for effectiveness measurement.

Changes in the carrying value of financial instruments that are designated and effective as hedges of future cash flows ("cash flow hedges") are recognised directly in equity and any ineffective portion is recognised immediately in the Income Statement. Amounts deferred in equity in respect of cash flow hedges are subsequently recognised in the Income Statement in the same period in which the hedged item affects net profit or loss.

F Impairment of assets

Impairments of assets are calculated as the difference between the carrying value of the asset and its recoverable amount, if lower. Where such an asset does not generate cash flows that are independent from other assets, the recoverable amount of the cash-generating unit to which that asset belongs is estimated. Recoverable amount is defined as the higher of fair value less costs to sell and estimated value in use at the date the impairment review is undertaken. Value in use represents the present value of expected future cash flows, discounted using a pre-tax discount rate that reflects current market assessments of the time, value of money, and the risks specific to the asset for which the estimates of future cash flows have not been adjusted. Tests for impairment are carried out only if there is some indication that the carrying value of the assets may have been impaired. Impairments are recognised in the Income Statement and, where material, are disclosed separately.

G Income taxation

Income taxation comprises current and deferred taxation. Income taxation is recognised where a taxation asset or liability arises that is permitted to be recognised under generally accepted accounting principles. All identifiable taxation assets or liabilities are recognised in the Income Statement except to the extent that the taxation arising relates to other items recognised directly in equity, in which case such taxation assets or liabilities are recognised in equity.

Taxation

Corporation tax is provided at amounts expected to be paid (or recovered) using the tax rates and laws that have been enacted or substantively enacted by the Statement of Financial Position date.

G Income taxation (continued)

Deferred Taxation

Deferred taxation is provided using the Statement of Financial Position liability method, and is recognised on temporary differences between the carrying amounts of assets and liabilities in the regulatory financial statements, and the corresponding tax bases used in the computation of taxable profit.

Deferred taxation liabilities are generally recognised on all taxable temporary differences, and deferred taxation assets are recognised to the extent that is probable that taxable profits will be available against which deductible temporary differences can be utilised.

Deferred taxation is calculated at the tax rates that are expected to apply in the period when the liability is settled or the asset is realised, based on the tax rates (and tax laws) that have been enacted, or substantively enacted, by the Statement of Financial Position date.

Unrecognised deferred taxation assets are reassessed at each Statement of Financial Position date and are recognised to the extent that it has become probable that future taxable profit will allow the deferred taxation asset to be recovered.

H Operating and finance income

General

As indicated above, see B. Transmission availability arrangements, amounts invoiced in respect of transmission availability charges, net of value added tax, are attributed to operating income, finance income or as an adjustment to the carrying value of the Transmission owner asset in the manner described below. Finance and operating income reflect the principal revenue generating activity of the Company, that being revenue associated with the provision of transmission availability services and consequently, are presented as separate line items within the Income Statement before other costs and net interest costs.

Operating income

Operating income represents the income derived from the provision of operating services. Such services include those activities that result in the efficient and safe operation of the Company's transmission assets, and are reflective of the costs incurred in providing those services, including the cost of insuring the transmission assets on behalf of a standalone transmission owner. An estimate has been made as to the appropriate revenue that should be attributable to a stand-alone operator with responsibility for operations, maintenance and insurance.

Finance income

Finance income arising from the provision of transmission availability services represents the return that an efficient stand-alone "transmission owner" would expect to generate from the holding of the Transmission owner asset and an estimate has been made as to the appropriate return that such an owner would generate having regard to the risks associated with those arrangements. The return that is generated on this asset is allocated to each period using the effective interest rate method.

I Cash and cash equivalents

Cash and cash equivalents include cash held at bank and in hand, together with short-term highly liquid investments with an original maturity of less than six months that are readily convertible to known amounts of cash, and subject to an insignificant change in value.

J Critical accounting judgements, key assumptions and sources of estimation uncertainty

The preparation of regulatory financial statements requires management to make accounting judgements, estimates and assumptions that affect the reported amounts of assets and liabilities, disclosures of contingent assets and liabilities, and the reported amounts of revenue and expenses during the reporting period. Actual results could differ from these estimates.

Assumptions and estimates are reviewed on an on-going basis and any revisions to them are recognised in the period the revision occurs. The following is a summary of the critical accounting policies adopted by the Company together with information about the key judgements, estimations and assumptions that have been applied.

i) Transmission availability arrangements – income and related asset recognition

The Directors after due enquiry have identified that the characteristics of the regulatory, legal and contractual arrangements that give rise to transmission availability charges are consistent with the principles contained within IFRIC 12. Consequently, the accounting for charges made by the Company for transmission network availability is consistent with that interpretation.

As a consequence of this decision, the following outcomes follow:

- a. A Transmission owner asset has been recognised at cost in accordance with the principles of IFRIC 12; and
- b. In accordance with IFRIC 12, transmission availability charges are recognised in the regulatory financial statements in three ways: as finance income, as operating income and as an adjustment to the carrying value of the Transmission owner asset.

An alternative accounting analysis could result in a significantly different accounting outcome which would affect the amounts and classification of asset and liabilities in the Statement of Financial Position and alter the income recognition and presentation of amounts included within the Income Statement.

The Company has determined that the Transmission owner asset will be recovered over a period of 20 years from the date of Licence grant (17 December 2014) – being the principal period over which the Company is permitted to levy charges for transmission availability. This assumption has the effect of determining the amount of finance income and carrying value of the Transmission owner asset that is recognised in any one year over the life of the project.

ii) Operating and finance income

Operating income

Operating income represents the income derived from the provision of operating services to our principal customer, NGET. Such services include those activities that result in the efficient and safe operation of those assets and are reflective of the costs incurred in providing those services, including the cost of insuring those assets on behalf of a stand-alone transmission owner. Estimates and judgements have been made by management to estimate the appropriate amount of revenue that would be attributable to this income classification as if this service were provided by an independent stand-alone operator with responsibility for operations, maintenance and insurance. To the extent that an alternative judgement or estimate was made as to the reasonable level of revenue attributable to such an operator, then in the case of the Company, the level of income attributed to finance income (see below) would be amended.

J Critical accounting judgements, key assumptions and sources of estimation uncertainty (continued) ii) Operating and finance income (continued)

Finance income

Finance income arising from the provision of transmission availability services represents an estimate of the return that an efficient stand-alone and independent "transmission owner" would expect to generate from the holding of the Transmission owner asset. Estimates and judgements have been exercised by management to determine an appropriate return to the owner of such an asset having regard to the risks associated with those arrangements. To the extent that an alternative judgement or estimate was made as to the reasonable level of return attributable to such a transmission asset owner, then in the case of the Company, the level of income attributed to operating income (see above) would be amended.

iii) Hedge accounting and consideration of the fair value of derivative financial instruments

The Company uses derivative financial instruments to hedge certain economic exposures in relation to movements in RPI and LIBOR as compared with the position that was expected at the date the underlying transaction being hedged was entered into. The Company fair values its derivative financial instruments and records the fair value of those instruments on its Statement of Financial Position.

Movements in the fair values of the Company's derivative financial instruments may be accounted for using hedge accounting where the requirements of hedge accounting are met under IFRS including the creation of compliant documentation and meeting the effectiveness testing requirements. If a hedge does not meet the criteria for hedge accounting, or where there is some degree of ineffectiveness, then the change in fair value in relation to these items will be recorded in the Income Statement. Otherwise, in respect of the Company's derivative financial instruments, these changes in fair value are recognised in other comprehensive income.

The Company's derivative financial instruments currently meet the stringent hedge accounting criteria under IFRS and all movements in fair value of these instruments have been recognised in other comprehensive income. If these hedging criteria had not have been met these movements would have been recognised in the Income Statement. As referred to above, the Company carries its derivative financial instruments in its Statement of Financial Position at fair value. No market prices are available for these instruments and consequently the fair values are derived using financial models developed by a third party that is independent of the Company, but use observable market data in respect of RPI and interest rates as an input to valuing those derivative financial instruments.

K Accounting developments

i) Accounting standards as applied to these regulatory financial statements

The Company has adopted the following IFRSs in these regulatory financial statements, with no significant impact on the regulatory financial statements as a result:

- Annual Improvements to IFRSs 2012-2014 Cycle.
- Disclosure Initiative Amendments to IAS 7.

The following Adopted IFRSs have been issued but have not been applied by the Company in these regulatory financial statements. Their adoption is not expected to have a material effect on the regulatory financial statements unless otherwise indicated:

- · IFRS 9 Financial Instruments (effective date 1 January 2018;
- · IFRS 15 Revenue from Contracts with Customers (effective date 1 January 2018);
- · IFRS 16 Leases (effective date January 2019);
- · Amendments to IAS 12: Recognition of Deferred Tax Assets for Unrealised Losses (effective date to be confirmed);
- · Annual Improvements to IFRSs 2014-2016 Cycle (effective date 1 January 2018).

K Accounting developments (continued)

i) Accounting standards as applied to these regulatory financial statements (continued)

With the exception of the items disclosed below, the above standards and interpretations are either not relevant to the Company's current activities or are not expected to have any significant impact on the measurement of assets or liabilities or disclosures in the regulatory financial statements. Those standards and interpretations that are expected to impact on the regulatory financial statements, either by way of measurement or disclosure, are as follows:

IFRS 9, 'Financial instruments' - classification and measurement'

IFRS 9 is currently expected to be effective with effect from the financial year commencing 1 April 2018, although the effective date for adoption may change as a result of an on-going consultation process. The Company does not expect that the adoption of IFRS 9 will lead to any material measurement changes as compared with the policies currently adopted by the Company. However, it is expected that IFRS 9 will require additional and different disclosures to those currently provided.

IFRS 15, 'Revenue from Contracts with Customers'

IFRS 15 is currently expected to be effective with effect from the financial year commencing 1 April 2018.

A 1% margin was applied to the transfer value of the OFTO assets and revenue was calculated by grossing up the cost of sales to reflect this margin. OFTO SPVs have a policy of applying a fixed 1% margin during construction and this policy is unchanged on adoption of IFRS 15. Therefore, there is no impact on the revenue recognised in relation to the value of the asset transferred to the SPVs at the start of the project.

A feature of the OFTOs is the absence of ongoing lifecycle works although it does include provisioning for decommissioning costs which would scope into the above "lifecycle margin". In all cases, this cash flow would occur in the later phases of the project and therefore the project to date revenue recognised is nil. Decommissioning costs have not changed since contract inception. As lifecycle costs have remained unchanged and the margin applicable to such costs remains at 1%, both costs and revenue remain unchanged and is unaffected by the introduction of IFRS 15.

Currently the OFTO's SPV re-calculates the OPEX margin % on a six monthly basis in line with new OPEX cashflow expectations. Given the only changes to cash flows on a project to date basis affects this margin, the introduction of IFRS 15 does not result in a difference in the amount of revenue recognised under the existing standards.

For the reasons above, the Company does not expect that the adoption of IFRS 15 will lead to any material measurement changes as compared with the policies currently adopted by the Company.

2 Operating segment

The Board of Directors is the Company's chief operating decision-making body. The Board of Directors has determined that there is only one operating segment - electricity transmission. The Board of Directors evaluates the performance of this segment on the basis of profit before and after taxation, and cash available for debt service (net cash inflows from operating activities less net cash flow used in investing activities). The Company and segmental results, Statement of Financial Position and relevant cash flows can be seen in the Income Statement, the Statement of Financial Position and cash flow statement on pages 29, 31 and 33 respectively. Additional notes relating to the Company and segment are shown in the notes to the regulatory financial statements on pages 34 to 57.

The electricity transmission operation of the Company comprises the transmission of electricity from a wind farm located approximately seven nautical miles from North Foreland Point on the Kent coast and then connecting directly into the national grid at the Richborough 132kV substation near Sandwich.

All of the Company's sales and operations take place in the UK and its territorial waters.

All of the assets and liabilities of the Company arise from the activities of the segment.

3 Revenue

Revenue of £4,213k, (2017: £4,370k) relates primarily to the Company's activity as a provider of electricity transmission services to the Company's principal customer - NGET. The vast majority of the Company's income is derived from NGET.

4	Other operating expenses	2018	2017
	Total	£'000s 6,137	£'000s 4,459
	Other operating expenses includes auditor remuneration, which comprises:		
	Auditor remuneration (1)	18	16
	Audit-related assurance services (2)	15	14
	Total	33	30

^{1.} These represent fees payable for services in relation to engagements which are required to be carried out by the auditor. In particular this includes fees for audit reports on regulatory returns.

Fees payable for the audit of these regulatory Financial Statements were £18k to KPMG LLP (2017 : £16k payable to KPMG LLP). Fees payable to the Company's auditor in respect of services in relation to engagements performed as per the License were £15k to KPMG LLP (2017 : £14k payable to KPMG LLP).

The Directors received no salary, fees or other benefits in the performance of their duties during the current or preceding year. The Company had no employees in the current or preceding year. All costs of the Directors and other staff are borne by the shareholders who second their employees to the Company.

5 Finance Income (Net)

Net interest income and expense is as tabulated below:

	2018	2017
	£'000s	£'000s
Interest income		
Interest on bank accounts and deposits	29	21
Financial income	12,228	12,314
	12,257	12,335
Interest expense and other financial costs		
Interest on senior debt	(6,625)	(6,881)
Interest on subordinated debt	(2,605)	(2,147)
Other financial costs	(3)	(2)
	(9,233)	(9,030)
	3,024	3,305

^{2.} These represent fees payable for services in relation to engagements to be performed as per the Licence.

6 Taxation

a) Taxation on items included in the Income Statement

The net taxation for the year is £542k (2017: £521k), and the composition of that credit is shown in the table below.

The taxation credit on current year profits arising in the year represents deferred taxation, and has been computed at 17% (2017 : 17%). There is no current taxation included in the Income Statement (2017 : £nil).

The taxation credit for the year differs from the standard rate of corporation tax in the UK of 19% (2017 : 20%) for the reasons outlined below:

	2018 £'000s	2017 £'000s
Profit before taxation	1,100	3,216
Taxation at 19% (2017 : 20%) on profit/(loss) before taxation	209	643
Effects of:		
partial exemption of financial asset revenue	23	(5)
adjustments in respect of prior periods	-	(16)
non qualifying amortisation	332	· -
effect of deferred tax rates	(22)	(101)
Total tax charge	542	521

b) Taxation on items included in other comprehensive income

The net taxation debit on items included in other comprehensive income for the year is £1,275k debit (2017:£1,913k credit) and comprises a debit on items arising in the current year of £1,275k computed at 17% (2017:17%) on gains of £7,500k (2017:£12,015k loss) and a charge relating to the effect of rate change of £nil. The taxation debit on items arising in the current year represents deferred taxation. There is no current taxation included in other comprehensive income (2017:£nil).

7 Transmission owner asset

The movement in the carrying value of the transmission owner asset is shown in the table below:

	2018	2017
	£'000s	£'000s
Opening Balance	179,106	178,347
Additions	· •	-
Income recognised in the income statement:		
Interest income	12,228	12,314
Other Movements		·
Cash expenditure	3,776	4,077
Cash received	(19,408)	(15,632)
Closing Balance	175,702	179,106
Comprising:		
Amounts falling due within one year	3,413	4,461
Amounts falling due after more than one year	172,289	174,645
	175,702	179,106

7 Transmission owner asset (continued)

The Transmission owner asset is carried at amortised cost. The estimated fair value of the Transmission owner asset at 31 March 2018 was £228,417k (2017: £231,218k). The basis for estimating the fair value of the Transmission owner asset was to estimate the net cash flows arising over the estimated economic life of the project, and to discount those expected net cash flows at a discount rate of 3.76% per year, (2017: 3.64% per year).

8 Deferred taxation asset

The net deferred taxation asset recognised in the Statement of Financial Position arises as follows:

	Fair value losses on	Accelerated capital	Tax losses	Total
	derivatives £'000s	allowances £'000s	£'000s	£'000s
At 31 March 2017	4,251	(9,042)	8,441	3,650
Additions/(Utilisations)	(1,275)	6,706	(7,250)	(1,819)
Effect of change in tax rate At 31 March 2018	2,976	(2,336)	1,191	1,831

The deferred tax asset is expected to be recoverable over the asset's life and utilised on future taxable profits.

The fair value losses on derivatives are recognised in the statement of comprehensive income. Accelerated capital allowances and tax losses are recognised in the income statement.

Reductions in the UK corporation tax rate from 20% to 19% (effective from 1 April 2017) and to 18% (effective 1 April 2020) were substantively enacted on 26 October 2015, and an additional reduction to 17% (effective 1 April 2020) was substantively enacted on 6 September 2016. This will reduce the company's future current tax charge accordingly. The deferred tax assets and liabilities at 31 March 2018 have been calculated based on these rates

9 Cash and cash equivalents

Cash and cash equivalents include amounts of £12,406k (2017 : £8,572k) that the Company can only use for specific purposes and with the consent of the Company's lenders. Of the remaining cash and cash equivalents £nil (2017 : £nil) require the consent of the Company's lenders prior to use, but are held for general corporate purposes.

The estimated fair value of cash and cash equivalents approximates to its carrying value.

10 Borrowings

The following table analyses borrowings:

	2018	2017
Current	£'000s	£'000s
Loans	4,433	4,555
Loan interest	545	528
Subordinated debt interest	2,388	2,121
	7,366	7,204
Non-current		
Loans	153,296	157,471
Subordinated debt loans	20,625	20,625
	173,921	178,096
Total borrowings	181,287	185,300

Loans comprise the Senior Term Loan and the Short Term Loan which bear interest at a margin over LIBOR. The secured subordinated loan stock has been subscribed by the fellow Company. The loan stock bears interest at a fix rate of 8.5% plus the greater of 1% or ((RPId/RPId-d)-1)x 100) per cent where RPId is the value of RPIx published or determined for the March which is the last month prior to the beginning of the financial year and RPId-1 is the value of RPIx for the March which is the last month prior to the beginning of the previous financial year. For the current financial year 11.91% (2017 : 9.94%) was used to accrue interest. The loan stock is repayable in instalments between 2018 and 2034.

All borrowings are carried at amortised cost. Fair value information in relation to borrowings is shown in note 16.

There have been no instances of default or other breaches of the terms of the financing agreements during the year in respect of all borrowings outstanding at 31 March 2018.

11 Trade and other payables

Trade and other payables are as tabulated below.

	2018	2017
	£'000s	£'000s
Trade payables	716	1,460
Other taxes	526	633
Accrued expenses	1,693	2,106
	2,935	4,199

Due to their short maturities, the fair value of all financial instruments included within trade and other payables approximates to their book value. All trade and other payables are recorded at amortised cost.

12 Derivative financial instruments

Derivatives are financial instruments that derive their value from the price of an underlying item, such as interest rates or other indices. The Company's use of derivative financial instruments is described below.

RPI swaps

The Company has entered into arrangements with third parties for the purpose of exchanging the majority (approximately 63.5%) of variable cash inflows arising from the operation of the Company's transmission assets in exchange for a pre-determined stream of cash inflows from these third parties. These arrangements meet the definition to be classified as derivative financial instruments. The Company entered into these derivative arrangements on 17 December 2014 with a forward start date for the calculation of the relevant rates commencing on 17 December 2014 and ending on 16 December 2033.

Under the terms of the Licence, regulatory and other contractual agreements, the Company is permitted to charge its principal customer, NGET, an agreed amount for the services it provides. This amount is uplifted each year commencing 1 April by an amount computed by reference to the average increase in RPI over the previous 12-month period measured from 1 January through to 31 December. Where there is a reduction, or no increase, in the retail price index over the relevant period, then the charges remain unaltered from the previous year. These derivative arrangements (RPI swaps) have the effect of exchanging variable cash inflows (impacted by changes in RPI) in exchange for a known and predetermined stream of cash flows expected to arise over the same period.

Interest Rate swaps

The Company has entered into arrangements with third parties for the purpose of exchanging the interest rate cash flows, based on the notional amount of the Senior Term Loan from a fixed rate of 2.287% to a floating rate of 6M LIBOR for the period from 17 December 2014 to 16 December 2033. The Directors believe that the use of these swaps is consistent with the Company's risk management objective and strategy for undertaking these hedges. The vast majority of the Company's cash outflows relate to borrowings that carry a fixed coupon so that both the principal repayments, and coupon payments are predetermined. The purpose of these hedges is to generate highly certain cash inflows so that the Company can meet its obligations under the terms of its borrowing arrangements.

The Directors believe that these hedging relationship are highly effective and that the forecast cash inflows are highly probable and as a consequence have concluded that the RPI swap and Interest Rate Swap derivatives meet the definition of a cash flow hedge and have formally designated them as such.

Carrying value of all derivative financial instruments

All of the Company's derivative financial instruments are carried at market value. The carrying value of all derivative financial liabilities at 31 March 2018 was £17,503k (2017: £25,003k). All of the movement in the fair value of these derivative instruments has been recorded in the cash flow hedge reserve amounting to a credit of £7,500k (2017: debit of £12,015k).

Ineffective portion of cash flow hedge recognised in the income statement was £nil (2017: £nil).

Further details regarding financial instruments and their related risks are given in note 16.

13 Called-up share capital

Share capital is as analysed below.

Authorised, allotted, called-up and fully paid	2018 No. 000's	2017 No. 000's
Opening balance Shares issued	1	1
Closing balance	1	1
	2018 £ 000's	2017 £ 000's
Authorised, allotted, called-up and fully paid Opening balance	1	1
Shares issued Closing balance		1

The Company has one class of Ordinary Share with a nominal value of £1 which carries no right to fixed income. The holders of Ordinary Shares are entitled to receive dividends as declared and are entitled to one vote per share at meetings of the Company.

Dividends

		2018 £ 000's	2017 £ 000's
Dividends paid		_	262
Dividends per share	No. of Shares 1000	2018 	2017 £ 262

The holders of the ordinary shares are entitled to receive dividends as declared from time to time and are entitled to one vote per share at meetings of the Company.

14 Cash flow statement

a) Reconciliation of net cash flow to movement in net debt

The reconciliation of net cash flow to movement in net debt is as analysed below:

	2018	2017
	£'000s	£'000s
Movement in cash and cash equivalents	3,834	(2,816)
Net increase in borrowings 1	13,243	13,442

15 Related party transactions

The following information relates to transactions with related parties during the year. These transactions were carried out in the normal course of business.

	Total	
	2018	2017
Expenditure	£'000s	£'000s
Thanet OFTO Intermediate Limited - Interest	2,605	2,147
Balfour Beatty Investments Limited - Management Services	316	322
Equitix Infrastructure 3 Limited - Managed Services	296	315
Balfour Beatty Utility Solutions - O & M Services	2,367	3,654
	5,584	6,438
	Total	
	2018	2017
	£'000s	£'000s
Outstanding balances at 31 March:		
Borrowings payable - Thanet OFTO Intermediate Limited	20,625	20,625
Interest accrual - Thanet OFTO Intermediate Limited	2,388	2,121
Balfour Beatty Investments Limited - Management Services	26	25
Equitix Infrastructure 3 Limited - Managed Services	-	24
Balfour Beatty Utility Solutions - O & M Services	339	669
	23,378	23,464
A summary of funding transactions with Thanet OFTO Intermediate Limited is	shown below:	
•	2018	2017
	£'000s	£'000s
Borrowings from intermediate undertaking		
Opening balance	2,121	2,714
Interest payments	(2,338)	(2,740)
Non-cash interest	2,605	2,147
Closing balance	2,388	2,121

Borrowings from Thanet OFTO Intermediate Limited were negotiated on normal commercial terms and are repayable in accordance with the terms of the secured 8.50% loan notes 2034 ("the notes"). Repayments of interest were made during the year. Absent any non-compulsory repayment of the notes, the notes are contractually repayable on 30 September 2034.

BBI was a related party of the Company during the year ended 31 March 2018 by virtue of it being a related party in BBOHL through to 31 March 2018. The services provided to the Company by BBI were under normal commercial terms and related to professional management and financial services as described in the PSA.

Equitix Infrastructure 3 Limited (Equitix) was a related party of the Company during the year ended 31 March 2018 by virtue of it being a related party of a Company that held 80% of the equity shareholding in Thanet OFTO Holdco Limited through to 31 March 2018. The services provided to the Company by Equitix were under normal commercial terms and related to professional management and financial services.

15 Related party transactions (continued)

Balfour Beatty Utility Solutions Limited (BBUS) was a related party of the Company during the year ended 31 March 2018 by virtue of it being a related party in BBOHL through to 31 March 2018. The services provided to the Company by BBUS were under normal commercial terms and related to operator services as detailed in the Operating and Maintenance Agreement.

No amounts have been provided at 31 March 2018 (2017 : £nil), and no expense was recognised during the year (2017 : £nil) in respect of bad or doubtful debts for any related party transactions.

16 Information relating to financial instruments and the management of risk

The Company has the following financial instruments:

The Company has the following illiancial instruments.	2018 £'000s	2017 £'000s
Financial assets that are debt instruments		
measured at amortised cost:		
Trade and other receivables	731	5,336
Financial Asset	175,702	179,106

a) Fair value disclosures

The following is an analysis of the Company's financial instruments at the Statement of Financial Position date comparing the carrying value included in the Statement of Financial Position with the fair value of those instruments at that date. None of the Company's financial instruments have quoted prices. Consequently, the following techniques have been used to determine fair values as follows:

- Cash and cash equivalents approximates to the carrying value because of the short maturity of these instruments;
- Transmission owner asset based on the net present value of net discounted cash flows, using a discount rate of 3.76%; (2017: 3.64%)
- Current borrowings approximates to the carrying value because of the short maturity of these instruments;
- Non-current borrowings based on the net present value of net discounted cash flows, using a discount rate of 3.76%; (2017: 3.64%)
- Derivative financial instruments based on the net present value of discounted cash flows;

The tables on the following page compare the carrying value of the Company's financial instruments with the fair value of those instruments at the Statement of Financial Position date, using the techniques described above. The table excludes those instruments where the carrying value of the financial instrument approximates to its fair value because the carrying value approximates to fair value as a result of the short maturity of those instruments. Consequently, no financial instruments which fall due within the next twelve months are included in this table.

16 Information relating to financial instruments and the management of risk (continued) a) Fair value disclosures (continued)

Valuation Method	Carrying value	
	2018 £'000s	2017 £'000s
Assets		
Non-current Transmission owner asset	75,702	179,106
	75,702 75,702	179,106
Liabilities		
	53,296	157,471

	31,424	203,033
	Fair value	
	2018	2017
	£'000s	£'000s
Assets		
Non-current Transmission owner asset Level 3 22	28,417	231,218
2.	28,417	231,218
Liabilities		
	52,137	170,893
	11,886	44,773
	17,503	25,003
	21,526	240,669

The best evidence of fair value is a quoted price in an actively traded market; where this data is available then the instrument is classified as having been determined using a level 1 valuation. In the event that the market for a financial instrument is not active, alternative valuation techniques are used. The Company does not have any financial instruments where it is eligible to apply a level 1 valuation technique.

With the exception of the Transmission owner asset and borrowings, all of the other fair values have been valued using Level 2 valuation techniques as identified in the preceding table which means that in respect of the Company's financial instruments these have been valued using models where all significant inputs are based directly or indirectly on observable market data. Fair value of interest rate swaps has been calculated using the RBS toolkit taking into consideration loan repayment profiles. RPI swaps have been valued by management by discounting future cashflows from the Company's financial model, with reference to bank valuations from four banks; Sumitomo Mitsui Banking Corporation (SMBC), Unicredit Bank AG, The Bank Of Tokyo-Mitsubishi UFJ Ltd., and Credit Agricole Corporate and Investment Bank. Management have benchmarked the individual bank valuations against each other to verify the valuations.

In the case of the Transmission owner asset, these have been valued using a valuation technique where significant inputs such as the assumed discount rate are based on unobservable market data. This means that these financial instruments have been classified as having been valued using a level 3 valuation and have been identified as such in the previous table.

The Transmission asset has been valued using a discount rate of 3.76%. At a discount rate of 3.26% the fair value of the asset is £236,462k and at a discount rate of 4.26% the fair value of the asset is £220,786k.

16 Information relating to financial instruments and the management of risk (continued)

a) Fair value disclosures (continued)

The valuation categories that have been assigned to the financial instruments in the forgoing table have been applied throughout the year and there have been no reclassifications or transfers between the various valuation categories during the year.

Cash flow hedges: Interest Rate Swaps

Cash now nedges. Interest Rate Swaps	2018 Average contract fixed interest rate	2018 Notional principal value	2018 Fair value
Less than 1 year	% 2.29%	£'000s 4,978	£'000s 3,978
1 to 2 years	2.29%	5,773	(3,834)
2 to 5 years	2.29%	22,503	(4,366)
More than 5 years	2.29%	127,632	(7,120)
•		160,886	(11,342)

b) Management of risk

The Board has overall responsibility for the Company's risk management framework. This risk framework is discussed further in the Operating and financial review.

The Company's activities expose it to a variety of financial risks, which arise in the normal course of business: market risk, credit risk, and liquidity risk. The overall risk management programme seeks to minimise the net impact of these risks on the operations of the Company by using financial instruments, including the use of derivative financial instruments — being the RPI swaps and Interest rate swaps described in note 12 that are appropriate to the circumstances and economic environment within which the Company operates. The objectives and policies for holding, or issuing, financial instruments and similar contracts, and the strategies for achieving those objectives that have been followed during the year are explained below.

i) Market risk

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Changes in market price are derived from: currency movements; interest rate changes; and changes in prices caused by factors other than those derived from currency or interest rate changes.

The Company operates in the UK and has no significant exposure to foreign currency, and therefore this has an immaterial impact on market risk. Short-term financial assets and liabilities, such as trade receivables and payables, are not subject to market risk. Interest rate risk arises from the use of following financial instruments: Transmission owner asset; borrowings; and cash and cash equivalents.

16 Information relating to financial instruments and the management of risk (continued) b) Management of risk (continued)

The Transmission owner asset is carried at amortised cost, and the carrying value is affected by the rate of interest implicit within the calculation of finance income that has a consequential effect on the carrying value of the Transmission owner asset.

The fair value of the Transmission owner financial asset is subject to price risk caused by changes in RPI.

All of the Company's borrowings, have been issued at variable rates. All borrowings are carried at amortised cost, and therefore changes in interest rates, in respect of those borrowings, do not impact the Income Statement or Statement of Financial Position.

Cash and cash equivalents all attract interest at variable rates and therefore are subject to cash flow interest rate risk as cash flows arising from these sources will fluctuate with changes in interest rates. However, the interest cash flows arising from these sources are insignificant to the Company's activities.

The cash flows arising from the Transmission owner financial asset fluctuate with positive changes in RPI. The Company has entered into a series of RPI swaps to significantly reduce this cash flow risk. Further details and an explanation of the rationale for entering into these arrangements are explained in note 12.

For the reasons outlined in note 12, the Directors have designated the RPI swaps as cash flow hedging derivatives and these are carried at fair value in the Statement of Financial Position. The RPI swaps are considered to be effective cash flow hedges.

ii) Credit risk

Credit risk is the risk of financial loss to the Company if a customer or counterparty fails to meet its contractual obligations.

Credit risk primarily arises from the Company's normal commercial operations that actually, or potentially, arises from the Company's exposure to: a) NGET in respect of invoices submitted by the Company for transmission services; b) the counterparties to the RPI swaps and Interest rate swaps described in note 12; and c) short term deposits. There are no other significant credit exposures to which the Company is exposed. The maximum exposure to credit risk at 31 March 2018 is the fair value of all financial assets held by the Company. Information relating to the fair value of all financial assets is given above – note 16 (a). None of the Company's financial assets are past due or impaired.

NGET is the Company's principal customer and income derived from NGET represents the vast majority of the Company's income. NGET operates a low risk monopoly business within the UK, and the regulatory regime under which they operate results in a highly predictable, and stable, revenue stream. The regulatory regime is managed by The Authority and is considered by the Directors to have a well-defined regulatory framework, which is classified as a predictable and a supportive regime by the major rating agencies. NGET has an obligation to maintain an investment grade credit rating, which it has currently maintained. It is also subject to a regulatory financial 'ring fence' that restricts NGET's ability to undertake transactions with other National Grid subsidiaries, which includes the paying of dividends, lending or the levying of charges. Even in the very unlikely circumstance of NGET's insolvency, it is probable that any amounts outstanding would still be recovered. This arises because NGET is also a 'protected energy Company' under the terms of the Energy Act 2004, which allows the Secretary of State to apply for an energy administration order which would give priority to the rescue of NGET as a going concern.

Having considered the credit risks arising in respect of the exposures to NGET, as detailed above, the Directors consider that those risks are extremely low. At 31 March 2018 amounts due from NGET amounted to £nil (2017 : £nil).

16 Information relating to financial instruments and the management of risk (continued)

b) Management of risk (continued)

In respect of the counterparties to the cash flow derivative hedges (RPI swaps and Interest Rate swaps) these arrangements have been entered into with banks. At 31 March 2018, the fair values attributable to these positions were liabilities amounting to £17,503k (2017 : £25,003k), and as a consequence there is no credit risk to the Company at this date.

Cash and cash equivalents comprise cash in hand and deposits which are readily convertible to cash. It is the Company's policy, and requirement under the Company's lending agreements, that such investments can only be placed with banks and other financial institutions with short term senior debt rating of at least A-1 or better issued by Standard & Poor's, or P-1 or better issued by Moody's. All of these deposits are subject to insignificant risk of change in value or credit risk.

iii) Liquidity risk and Going Concern

Liquidity risk is the risk that the Company will have insufficient funds to meet its liabilities. The Board of Directors manages this risk.

As a result of the regulatory environment under which the Company operates; the credit worthiness of the Company's principal customer (NGET); and the RPI swaps that has been put in place, the cash inflows generated by the Company are highly predictable and stable. In addition, all of the Company's senior debt carries a fixed coupon, and based on the forecasts prepared by the Company, all of these debt service costs are expected to be met from the cash inflows the Company is expected to generate over the whole period of the project. During the year ending 31 March 2018, senior debt-service costs amounted to £6,625k (2017 : £6,881k). There is no contractual obligation for the Company to service the secured borrowing until 17 December 2034, although it is the Company's intention to service this borrowing when cash flows are sufficient, and it is prudent to do so. Cash outflows in respect of the secured borrowings repayments amounted to £4,013k (2017 : £4,132k).

In accordance with the conditions of the various lending agreements, the Company is required to transfer funds to certain specified bank accounts and/or hold certain amounts on deposit for specified purposes. Access to these bank accounts by the Company is subject to the agreement of the lenders and, in particular, access to amounts held on deposit held for specified purposes is restricted under the lending agreements. Such specific purposes include the holding of sufficient funds in restrictive bank accounts to meet senior debt servicing requirements for a period of six months in the future. The Company's use of these funds is restricted either to the specific purpose contemplated by the lending agreements, or until certain conditions are met or exceeded. Where these conditions are met or exceeded then the use of any net cash generated in excess of the minimum necessary to meet the restrictive conditions is unfettered.

At 31 March 2018, cash and cash equivalents included £12,406k (2017: £8,572k) that are held for specific purposes in the manner described above and additional amounts of cash and cash deposits amounting to £nil (2017: £nil) which requires the consent of the Company's lenders but are available for general corporate purposes.

The Company prepares both short-term and long-term cash flow forecasts on a regular basis to assess the liquidity requirements of the Company. These forecasts also include a consideration of the lending requirements including the need to transfer funds to certain bank accounts that are restricted as to their use. It is the Company's policy to ensure, as far as possible, that it will have sufficient liquidity to meet its liabilities when due without incurring unacceptable losses or risking damage to the Company's reputation.

Future costs are potentially at risk due to the cost of decommissioning. To mitigate this risk a Decommissioning Reserve Account has been opened and will start to be funded from year 11.

b) Management of risk (continued)

During the year the Company has continued to meet its contractual obligations as they have fallen due and based on the forecasts prepared the Directors expect that the Company will continue to do so for the foreseeable future. The Company has exceeded its financial covenants in relation to the obligations that it has to senior debt holders and the forecasts continue to support that these will continue to be exceeded. In addition, further liquidity is also available in the form of committed facilities, as referenced above. All of these factors have allowed the Directors to conclude that the Company has sufficient headroom to continue as a going concern. The statement of going concern is included in the Operating and financial review.

The contractual cash flows shown in the table on this page are the contractual undiscounted cash flows relating to the relevant financial instruments. Where the contractual cash flows are variable based on a price or index in the future, the contractual cash flows in the table have been determined with reference to the relevant price, interest rate or index as at the Statement of Financial Position date.

In determining the interest element of contractual cash flows in cases where the Company has a choice as to the length of interest calculation periods and the interest rate that applies varies with the period selected, the contractual cash flows have been calculated assuming the Company selects the shortest available interest calculation periods.

Where the holder of an instrument has a choice of when to redeem, the following tables are prepared on the assumption the holder redeems at the earliest opportunity.

The numbers in the following tables have been included in the Company's cash flow forecasts for the purposes of considering Liquidity Risk as noted above. The table below shows the undiscounted contractual maturities of financial assets and financial liabilities, including interest.

iv) Sensitivities

Changes in RPI and LIBOR affect the carrying value of those financial instruments that are recorded in the Statement of Financial Position at fair value. Two financial instruments that are carried in the Statement of Financial Position at fair value are the stand-alone derivative financial instruments - RPI and Interest Rate swaps as described in note 12 above. As explained in note 12, the Directors believe that these derivative financial instruments have a highly effective hedging relationship with the underlying cash flow positions they are hedging, and they expect this relationship to continue into the foreseeable future. Any movement in the fair value of these derivatives would be expected to be recorded in the cash flow hedge reserve, and would not affect the Income Statement. Changes in the fair value of RPI and Interest Rate swaps are expected to be substantially matched by changes in the fair values of the positions they are hedging, due to the highly effective hedging relationships. However, the underlying positions being hedged - in the case of RPI swaps a substantial proportion of the cash flows emanating from the Transmission owner asset are carried at amortised cost. Consequently, any change in the fair value of the underlying hedged positions would not be recorded in the regulatory financial statements. The Directors are of the opinion that the net impact of potential changes in the fair value of the derivative financial instruments held by the Company has no substantive economic impact on the Company because of the corresponding economic impact on the underlying derivative financial instruments it is hedging.

Any changes in future cash flows in relation to the derivative financial instruments held by the Company, arising from future changes in RPI and LIBOR, are expected to be matched by substantially equal and opposite changes in cash flows arising from or relating to the underlying revenues and costs.

Swap liability fair value sensitivity

	SWAPS	SWAPS
	2018	2017
	£'000s	£'000s
At fair value	11,342	16,636
Interest Rate + 0.05%	9,914	16,553
Interest Rate - 0.05%	12,801	16,719

Swap liability fair value sensitivity analysis only impacts equity and not profit and loss, on the assumption that the hedging relationship remains 100% effective, as per the latest financial model forecasts.

Information relating to financial instruments and the management of risk (continued)Management of risk (continued)

RPI asset fair value sensitivity

	RPI	RPI
	2018	2017
	£'000s	£'000s
At fair value	6,160	8,367
RPI + 0.05%	5,384	9,227
RPI - 0.05%	6,952	7,511

RPI fair value sensitivity analysis only impacts equity and not profit and loss, on the assumption that the hedging relationship remains 100% effective, as per the latest financial model forecasts.

v) Capital management

The Company is funded by a combination of senior debt, subordinated debt and equity in accordance with the Directors' objectives of establishing an appropriately funded business consistent with that of a prudent offshore electricity transmission operator and the terms of all legal and regulatory obligations including those of the Licence and the Utilities Act 2000.

Senior debt is comprised of a Senior Term Loan borrowed in equal amounts from five different lenders (Sumitomo Mitsui Banking Corporation (SMBC), Unicredit Bank AG, The Bank Of Tokyo-Mitsubishi UFJ Ltd., Norddeutsche Landesbank Girozentrale and Credit Agricole Corporate and Investment Bank) at a LIBOR+1.6% rate. All senior debt is serviced on a six monthly basis. The Senior Term Loan is expected to amortise over the life of the project through to December 2033. The total carrying value of the Loans outstanding at 31 March 2018 amounted to £158,274k (2017: £162,554k). Cover ratios are managed by way of calculating any impact shareholder distributions may have on ratios prior to any distribution taking place.

The subordinated loan ranks behind the senior debt and is issued by the Company to Thanet OFTO Intermediate Limited. The subordinated loan was issued on a commercially priced basis, and carries a fixed rate coupon. At 31 March 2018 the total principal carrying value of the subordinated loan outstanding amounted to £23,013k 2017: £22,746k.

Ordinary equity share capital issued during the year amounted to £1 (2017: £1).

The Directors consider that the capital structure of the Company meets the Company's objectives, and is sufficient to allow the Company to continue its operations for the foreseeable future based on current projections, and consequently has no current requirement for additional funding.

17 Ultimate parent companies and controlling parties

The Company's immediate parent company is Thanet OFTO Holdco Limited, which is incorporated in The United Kingdom and registered in England and Wales. Thanet OFTO Holdco Limited is the parent company of the largest and smallest Company of which the Company is a member and for which Company accounts are drawn up. Copies of the parent financial statements are available from its registered address; Level 6, 350 Euston Road, London, NW1 3AX.

The Company's ultimate parent companies and controlling parties are Balfour Beatty plc and Equitix Fund III LP which are incorporated in The United Kingdom and registered in England and Wales. Copies of the financial statements for Balfour Beatty Plc are available from the registered address; 5 Churchill Place, Canary Wharf, London, United Kingdom, E14 5HU. Copies of the financial statements for Equitix Fund III LP are available from the registered address; Welken House, 10-11 Charterhouse Square, London, United Kingdom, EC1M 6EH.

18 Events after the reporting period

Following the failure of export circuit 1 in February 2015, due to a fault within the sub-sea cable, the Company has reached a settlement post settlement with the windfarm developer (Thanet Offshore Wind Limited "TOWL") for TOWL to pay the OFTO £2.5m in full and final settlement towards the £3m insurance deductible that was incurred by the OFTO in repairing this cable fault. The Company anticipates payment of the £2.5m within August 2018.
